

Datasheet for ABIN5656259 Kynurenic Acid ELISA Kit

Overview

Quantity:	96 tests
Target:	Kynurenic Acid (KYNA)
Reactivity:	Various Species
Method Type:	Competition ELISA
Detection Range:	24.69 ng/mL - 2000 ng/mL
Minimum Detection Limit:	24.69 ng/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Kynurenic Acid (KYNA). No significant cross-reactivity or interference between Kynurenic Acid (KYNA) and analogues was observed.
Sensitivity:	9.24 ng/mL
Target Details	
Target:	Kynurenic Acid (KYNA)

Alternative Name:	Kynurenic Acid (KYNA Products)

Target Type:	Chemical
Background:	Gene Name: Kynurenic Acid
	Gene Aliases: Kinurenic acid, Kynuronic acid, Kuinurenic acid, Transtorine
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	2 h
Plate:	Pre-coated
Protocol:	This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal
	antibody specific to Kynurenic Acid (KYNA) has been pre-coated onto a microplate. A
	competitive inhibition reaction is launched between biotin labeled Kynurenic Acid (KYNA) and
	unlabeled Kynurenic Acid (KYNA) (Standards or samples) with the pre-coated antibody specific
	to Kynurenic Acid (KYNA). After incubation the unbound conjugate is washed off. Next, avidin
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	The amount of bound HRP conjugate is reverse proportional to the concentration of Kynurenic
	Acid (KYNA) in the sample. After addition of the substrate solution, the intensity of color
	developed is reverse proportional to the concentration of Kynurenic Acid (KYNA) in the sample
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Kynurenic Acid (KYNA) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Kynurenic Acid (KYNA) were tested on 3 different plates, 8 replicates in each plate. CV(%) =
	SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all

	steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
