LPO ELISA Kit

Go to Froduct page

()	ve	r\/i	۱۸/
\cup	V C	1 / 1	 ٧V

Quantity:	96 tests
Target:	LPO
Reactivity:	Cow
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA
Product Details	

Sample Type:	Milk, Tears
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Lactoperoxidase (LPO). No significant cross-reactivity or interference between Lactoperoxidase (LPO) and analogues was observed.
Sensitivity:	0.063 ng/mL

Target Details

Target:	LPO	
Alternative Name:	Lactoperoxidase (LPO Products)	

Target Details

Background:	Gene Name: Lactoperoxidase	
	Gene Aliases: SPO, Salivary peroxidase	
Gene ID:	280844	
UniProt:	P80025	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Lactoperoxidase (LPO).	
	Standards or samples are then added to the appropriate microtiter plate wells with a biotin-	
	conjugated antibody specific to Lactoperoxidase (LPO). Next, Avidin conjugated to Horseradish	
	Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution	
	is added, only those wells that contain Lactoperoxidase (LPO), biotin-conjugated antibody and	
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is	
	terminated by the addition of sulphuric acid solution and the color change is measured	
	spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of	
	Lactoperoxidase (LPO) in the samples is then determined by comparing the O.D. of the sample	
	to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Lactoperoxidase (LPO) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Lactoperoxidase (LPO) were tested on 3 different plates, 8 replicates in each plate. CV(%) =	
	SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only	

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
