

Datasheet for ABIN5656404 LECT1 ELISA Kit

Overview

Quantity:	96 tests
Target:	LECT1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	31.25 pg/mL - 2000 pg/mL
Minimum Detection Limit:	31.25 pg/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Leukocyte Cell Derived Chemotaxin 1 (LECT1). No significant cross-reactivity or interference between Leukocyte Cell Derived Chemotaxin 1 (LECT1) and analogues was observed.	
Sensitivity:	12.8 pg/mL	
Target Details		
Target:	LECT1	
Alternative Name:	Leukocyte Cell Derived Chemotaxin 1 (LECT1 Products)

Background:	Gene Name: Leukocyte Cell Derived Chemotaxin 1	
	Gene Aliases: BRICD3, CHM-I, CHM1, CH-SP, Chondromodulin-1, Chondrosurfactant protein	
Gene ID:	11061	
UniProt:	075829	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Leukocyte Cell Derived	
	Chemotaxin 1 (LECT1). Standards or samples are then added to the appropriate microtiter plate	
	wells with a biotin-conjugated antibody specific to Leukocyte Cell Derived Chemotaxin 1	
	(LECT1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate	
	well and incubated. After TMB substrate solution is added, only those wells that contain	
	Leukocyte Cell Derived Chemotaxin 1 (LECT1), biotin-conjugated antibody and enzyme-	
	conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by	
	the addition of sulphuric acid solution and the color change is measured	
	spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Leukocyte Cell	
	Derived Chemotaxin 1 (LECT1) in the samples is then determined by comparing the O.D. of the	
	samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Leukocyte Cell Derived Chemotaxin 1 (LECT1) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Leukocyte Cell Derived Chemotaxin 1 (LECT1) were tested on 3 different plates, 8 replicates in	
	each plate. CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
