

Datasheet for ABIN5656405

Overview

Quantity:	96 tests
Target:	LECT1
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	31.25 pg/mL - 2000 pg/mL
Minimum Detection Limit:	31.25 pg/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Leukocyte Cell Derived Chemotaxin 1 (LECT1). No significant cross-reactivity or interference between Leukocyte Cell Derived Chemotaxin 1 (LECT1) and analogues was observed.
Sensitivity:	11.3 pg/mL
Target Details	
Target:	LECT1

Alternative Name:	Leukocyte Cell Derived Chemotaxin 1 (LECT1 Products)

Gene Name: Leukocyte Cell Derived Chemotaxin 1 Gene Aliases: BRICD3, CHM-I, CHM1, CH-SP, Chondromodulin-1, Chondrosurfactant protein

Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Leukocyte Cell Derived
	Chemotaxin 1 (LECT1). Standards or samples are then added to the appropriate microtiter plate
	wells with a biotin-conjugated antibody specific to Leukocyte Cell Derived Chemotaxin 1
	(LECT1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate
	well and incubated. After TMB substrate solution is added, only those wells that contain
	Leukocyte Cell Derived Chemotaxin 1 (LECT1), biotin-conjugated antibody and enzyme-
	conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated b
	the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Leukocyte Cel
	Derived Chemotaxin 1 (LECT1) in the samples is then determined by comparing the O.D. of the
	samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Leukocyte Cell Derived Chemotaxin 1 (LECT1) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Leukocyte Cell Derived Chemotaxin 1 (LECT1) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
