

#### Datasheet for ABIN5656450

# **Lipocalin 1 ELISA Kit**

#### Overview

| Quantity:                | 96 tests               |
|--------------------------|------------------------|
| Target:                  | Lipocalin 1 (LCN1)     |
| Reactivity:              | Human                  |
| Method Type:             | Sandwich ELISA         |
| Detection Range:         | 1.56 ng/mL - 100 ng/mL |
| Minimum Detection Limit: | 1.56 ng/mL             |
| Application:             | ELISA                  |

### **Product Details**

| Sample Type:       | Saliva, Tears   |
|--------------------|---|
| Analytical Method: | Quantitative  |
| Detection Method:  | Colorimetric  |
| Specificity:       | This assay has high sensitivity and excellent specificity for detection of Lipocalin 1 (LCN1). No significant cross-reactivity or interference between Lipocalin 1 (LCN1) and analogues was observed. |
| Sensitivity:       | 0.62 ng/mL  |

#### **Target Details**

| Target:           | Lipocalin 1 (LCN1)          |
|-------------------|-----------------------------|
| Alternative Name: | Lipocalin 1 (LCN1 Products) |

### **Target Details**

| Background:         | Gene Name: Lipocalin 1  |
|---------------------|---|
|                     | Gene Aliases: TP, PMFA, VEGP, Tlc, Tear Prealbumin, Tear lipocalin, Protein Migrating Faster            |
|                     | Than Albumin, Von Ebner Gland Protein   |
| Gene ID:            | 3933  |
| UniProt:            | P31025  |
| Application Details |   |
| Comment:            | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than |
|                     | 5 % within the expiration date under appropriate storage condition. To minimize extra influence         |
|                     | on the performance, operation procedures and lab conditions, especially room temperature, air           |
|                     | humidity, incubator temperature should be strictly controlled. It is also strongly suggested that       |
|                     | the whole assay is performed by the same operator from the beginning to the end.                        |
| Assay Time:         | 3 h   |
| Plate:              | Pre-coated  |
| Protocol:           | The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate             |
|                     | provided in this kit has been pre-coated with an antibody specific to Lipocalin 1 (LCN1).               |
|                     | Standards or samples are then added to the appropriate microtiter plate wells with a biotin-            |
|                     | conjugated antibody specific to Lipocalin 1 (LCN1). Next, Avidin conjugated to Horseradish              |
|                     | Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution           |
|                     | is added, only those wells that contain Lipocalin 1 (LCN1), biotin-conjugated antibody and              |
|                     | enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is               |
|                     | terminated by the addition of sulphuric acid solution and the color change is measured                  |
|                     | spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Lipocalin 1            |
|                     | (LCN1) in the samples is then determined by comparing the O.D. of the samples to the standard           |
|                     | curve.  |
| Assay Precision:    | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level            |
|                     | Lipocalin 1 (LCN1) were tested 20 times on one plate, respectively                                      |
|                     | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level             |
|                     | Lipocalin 1 (LCN1) were tested on 3 different plates, 8 replicates in each plate. CV(%) =               |
|                     | SD/meanX100   |
|                     | Intra-Assay: CV<10%   |
|                     | Inter-Assay: CV<12%   |
| Restrictions:       | For Research Use only   |
|                     |   |

## Handling

| Handling Advice: | The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption. |
|------------------|--|
| Storage:         | 4 °C,-20 °C  |
| Storage Comment: | -20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.           |
| Expiry Date:     | 4-8 months   |
