

# Datasheet for ABIN5656636

#### **MASP1 ELISA Kit**

#### Overview

Quantity:	96 tests
Target:	MASP1
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	15.62 pg/mL - 1000 pg/mL
Minimum Detection Limit:	15.62 pg/mL
Application:	ELISA

#### **Product Details**

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Mannose Associated Serine Protease 1 (MASP1). No significant cross-reactivity or interference between Mannose Associated Serine Protease 1 (MASP1) and analogues was observed.
Sensitivity:	6.9 pg/mL

# Target Details

Target:	MASP1
Alternative Name:	Mannose Associated Serine Protease 1 (MASP1 Products)

## **Target Details**

rarget betaile		
Background:	Gene Name: Mannose Associated Serine Protease 1	
	Gene Aliases: CRARF, PRSS5, Mannan-Binding Lectin Serine Peptidase 1, Ra-reactive factor	
	serine protease p100, Complement-activating component of Ra-reactive factor, Serine protease	
	5	
Gene ID:	17174	
UniProt:	P98064	
Pathways:	Complement System	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Mannose Associated	
	Serine Protease 1 (MASP1). Standards or samples are then added to the appropriate microtiter	
	plate wells with a biotin-conjugated antibody specific to Mannose Associated Serine Protease 1	
	(MASP1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate	
	well and incubated. After TMB substrate solution is added, only those wells that contain	
	Mannose Associated Serine Protease 1 (MASP1), biotin-conjugated antibody and enzyme-	
	conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by	
	the addition of sulphuric acid solution and the color change is measured	
	spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Mannose	
	Associated Serine Protease 1 (MASP1) in the samples is then determined by comparing the	
	O.D. of the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Mannose Associated Serine Protease 1 (MASP1) were tested 20 times on one plate,	
	respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Mannose Associated Serine Protease 1 (MASP1) were tested on 3 different plates, 8 replicates	

## **Application Details**

	in each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at
	4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant
	pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
