

Datasheet for ABIN5656656 MANSC1 ELISA Kit

Overview

Quantity:	96 tests
Target:	MANSC1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.781 ng/mL - 50 ng/mL
Minimum Detection Limit:	0.781 ng/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of MANSC Domain Containing Protein 1 (MANSC1). No significant cross-reactivity or interference between MANSC Domain Containing Protein 1 (MANSC1) and analogues was observed.	
Sensitivity:	0.27 ng/mL	
Target Details		
Target:	MANSC1	
Alternative Name:	MANSC Domain Containing Protein 1 (MANSC1 Products)

Target Details	
Background:	Gene Name: MANSC Domain Containing Protein 1
	Gene Aliases: LOH12CR3, Loss of heterozygosity 12 chromosomal region 3 protein

Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5 % within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
ssay Time: 3 h			
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to MANSC Domain Containing		
	Protein 1 (MANSC1). Standards or samples are then added to the appropriate microtiter plate		
	wells with a biotin-conjugated antibody specific to MANSC Domain Containing Protein 1		
	(MANSC1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each		
	microplate well and incubated. After TMB substrate solution is added, only those wells that		
	contain MANSC Domain Containing Protein 1 (MANSC1), biotin-conjugated antibody and		
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is		
	terminated by the addition of sulphuric acid solution and the color change is measured		
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of MANSC		
	Domain Containing Protein 1 (MANSC1) in the samples is then determined by comparing the		
	O.D. of the samples to the standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	MANSC Domain Containing Protein 1 (MANSC1) were tested 20 times on one plate,		
	respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	MANSC Domain Containing Protein 1 (MANSC1) were tested on 3 different plates, 8 replicates		
	in each plate. CV(%) = SD/meanX100		
	Intra-Assay: CV<10%		
	Inter-Assay: CV<12%		
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
