

Datasheet for ABIN5656730 MMP14 ELISA Kit

Overview

Quantity:	96 tests
Target:	MMP14
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	1.56 ng/mL - 100 ng/mL
Minimum Detection Limit:	1.56 ng/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Matrix Metalloproteinase 14 (MMP14). No significant cross-reactivity or interference between Matrix Metalloproteinase 14 (MMP14) and analogues was observed.
Sensitivity:	0.57 ng/mL
Target Details	
Target:	MMP14
Alternative Name:	Matrix Metalloproteinase 14 (MMP14 Products)

Target Details	
Background:	Gene Name: Matrix Metalloproteinase 14
	Gene Aliases: MMP-X1, MT1-MMP, MTMMP1, Membrane Inserted, Membrane-type matrix
	metalloproteinase 1, Membrane-type-1 matrix metalloproteinase
Gene ID:	4323
UniProt:	P50281
Pathways:	Autophagy
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Matrix Metalloproteinase
	14 (MMP14). Standards or samples are then added to the appropriate microtiter plate wells
	with a biotin-conjugated antibody specific to Matrix Metalloproteinase 14 (MMP14). Next,
	Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and
	incubated. After TMB substrate solution is added, only those wells that contain Matrix
	Metalloproteinase 14 (MMP14), biotin-conjugated antibody and enzyme-conjugated Avidin will
	exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of
	sulphuric acid solution and the color change is measured spectrophotometrically at a
	wavelength of 450nm \pm 10nm. The concentration of Matrix Metalloproteinase 14 (MMP14) in
	the samples is then determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Matrix Metalloproteinase 14 (MMP14) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Matrix Metalloproteinase 14 (MMP14) were tested on 3 different plates, 8 replicates in each

plate. CV(%) = SD/meanX100

Intra-Assay: CV<10%

Inter-Assay: CV<12%

Application Details		
Restrictions:	For Research Use only	
Handling		
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
