

## Datasheet for ABIN5656923 MAPK13 ELISA Kit

Overview

Quantity:	96 tests
Target:	MAPK13
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

## Product Details

Alternative Name:

Sample Type:	Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Mitogen Activated Protein Kinase 13 (MAPK13). No significant cross-reactivity or interference between Mitogen Activated Protein Kinase 13 (MAPK13) and analogues was observed.
Sensitivity:	0.061 ng/mL
Target Details	
Target:	MAPK13

Mitogen Activated Protein Kinase 13 (MAPK13 Products)

International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 1/3 | Product datasheet for ABIN5656923 | 07/25/2024 | Copyright antibodies-online. All rights reserved.

Target Details	
Background:	Gene Name: Mitogen Activated Protein Kinase 13 Gene Aliases: SAPK4, p38 Delta, Mitogen-activated protein kinase p38 delta, Stress-activated protein kinase 4
Gene ID:	5603
UniProt:	015264
Pathways:	MAPK Signaling, Neurotrophin Signaling Pathway, Hepatitis C, BCR Signaling, S100 Proteins

## Application Details

Q	The encluding of the trademonstrated based on the formula $f = f + f + f + f + f + f + f + f + f + $
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Mitogen Activated Protein
	Kinase 13 (MAPK13). Standards or samples are then added to the appropriate microtiter plate
	wells with a biotin-conjugated antibody specific to Mitogen Activated Protein Kinase 13
	(MAPK13). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each
	microplate well and incubated. After TMB substrate solution is added, only those wells that
	contain Mitogen Activated Protein Kinase 13 (MAPK13), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Mitogen
	Activated Protein Kinase 13 (MAPK13) in the samples is then determined by comparing the
	O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Mitogen Activated Protein Kinase 13 (MAPK13) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Mitogen Activated Protein Kinase 13 (MAPK13) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%

Application Details		
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only	
Handling		
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
