

## Datasheet for ABIN5657106 MYL9 ELISA Kit

Overview

Quantity:	96 tests
Target:	MYL9
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	78.12 pg/mL - 5000 pg/mL
Minimum Detection Limit:	78.12 pg/mL
Application:	ELISA

## Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Myosin Light Chain 9, Regulatory (MYL9). No significant cross-reactivity or interference between Myosin Light Chain 9, Regulatory (MYL9) and analogues was observed.	
Sensitivity:	27 pg/mL	
Target Details		
Target:	MYL9	
Alternative Name:	Myosin Light Chain 9, Regulatory (MYL9 Products)

Target Details	
Background:	Gene Name: Myosin Light Chain 9, Regulatory
	Gene Aliases: MLC2, LC20, MYRL2, MRLC1, 20 kDa myosin light chain, Myosin Regulatory Light
	Chain 2,Smooth Muscle Isoform, Myosin Regulatory Light Chain 1
Gene ID:	10398
UniProt:	P24844
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Myosin Light Chain 9,
	Regulatory (MYL9). Standards or samples are then added to the appropriate microtiter plate
	wells with a biotin-conjugated antibody specific to Myosin Light Chain 9, Regulatory (MYL9).
	Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and
	incubated. After TMB substrate solution is added, only those wells that contain Myosin Light
	Chain 9, Regulatory (MYL9), biotin-conjugated antibody and enzyme-conjugated Avidin will
	exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of
	sulphuric acid solution and the color change is measured spectrophotometrically at a
	wavelength of 450nm $\pm$ 10nm. The concentration of Myosin Light Chain 9, Regulatory (MYL9) ir
	the samples is then determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Myosin Light Chain 9, Regulatory (MYL9) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Myosin Light Chain 9, Regulatory (MYL9) were tested on 3 different plates, 8 replicates in each
	plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
