

## Datasheet for ABIN5657187 NPR3 ELISA Kit

Overview

Quantity:	96 tests
Target:	NPR3
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

## Product Details

Sample Type:	Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Natriuretic Peptide Receptor 3 (NPR3). No significant cross-reactivity or interference between Natriuretic Peptide Receptor 3 (NPR3) and analogues was observed.
Sensitivity:	0.115 ng/mL
Target Details	
Target:	NPR3

Target:	NPR3
Alternative Name:	Natriuretic Peptide Receptor 3 (NPR3 Products)

Target Details		
Background:	Gene Name: Natriuretic Peptide Receptor 3	
	Gene Aliases: GUCY2B, NPRC, ANPRC, Guanylate Cyclase C, Atrionatriuretic Peptide Receptor	
	C, Atrial natriuretic peptide clearance receptor	
UniProt:	P41740	
Pathways:	cAMP Metabolic Process	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Natriuretic Peptide	
	Receptor 3 (NPR3). Standards or samples are then added to the appropriate microtiter plate	
	wells with a biotin-conjugated antibody specific to Natriuretic Peptide Receptor 3 (NPR3). Next	
	Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and	
	incubated. After TMB substrate solution is added, only those wells that contain Natriuretic	
	Peptide Receptor 3 (NPR3), biotin-conjugated antibody and enzyme-conjugated Avidin will	
	exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of	
	sulphuric acid solution and the color change is measured spectrophotometrically at a	
	wavelength of 450nm $\pm$ 10nm. The concentration of Natriuretic Peptide Receptor 3 (NPR3) in	
	the samples is then determined by comparing the O.D. of the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Natriuretic Peptide Receptor 3 (NPR3) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Natriuretic Peptide Receptor 3 (NPR3) were tested on 3 different plates, 8 replicates in each	
	plate. CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
