

## Datasheet for ABIN5657301 NPX1 ELISA Kit

Overview

Quantity:	96 tests
Target:	NPX1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

## Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Neuronal Pentraxin I (NPTX1). No significant cross-reactivity or interference between Neuronal Pentraxin I (NPTX1) and analogues was observed.
Sensitivity:	0.056 ng/mL
Target Details	
Target:	NPX1

Alternative Name:	Neuronal Pentraxin I (NPX1 Products)

Target Details	
Background:	Gene Name: Neuronal Pentraxin I Gene Aliases: NARP1, NP-I, NP1
Gene ID:	4884
UniProt:	Q15818
Pathways:	Carbohydrate Homeostasis, Regulation of Cell Size, Signaling Events mediated by VEGFR1 and VEGFR2, Smooth Muscle Cell Migration, Platelet-derived growth Factor Receptor Signaling, VEGFR1 Specific Signals, SARS-CoV-2 Protein Interactome

## Application Details

5 % within the expiration date under appropriate storage condition. To minimize extra ir	Ifluence
on the performance, operation procedures and lab conditions, especially room tempera	ture, air
humidity, incubator temperature should be strictly controlled. It is also strongly suggest	ed that
the whole assay is performed by the same operator from the beginning to the end.	
Assay Time: 3 h	
Plate: Pre-coated	
Protocol: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter p	plate
provided in this kit has been pre-coated with an antibody specific to Neuronal Pentraxin	I
(NPTX1). Standards or samples are then added to the appropriate microtiter plate wells	with a
biotin-conjugated antibody specific to Neuronal Pentraxin I (NPTX1). Next, Avidin conju	gated to
Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TN	ИB
substrate solution is added, only those wells that contain Neuronal Pentraxin I (NPTX1)	, biotin-
conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The e	nzyme-
substrate reaction is terminated by the addition of sulphuric acid solution and the color	change
is measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration	tion of
Neuronal Pentraxin I (NPTX1) in the samples is then determined by comparing the O.D.	of the
samples to the standard curve.	
Assay Precision: Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high I	evel
Neuronal Pentraxin I (NPTX1) were tested 20 times on one plate, respectively	
Inter-assay Precision (Precision between assays): 3 samples with low, middle and high	level
Neuronal Pentraxin I (NPTX1) were tested on 3 different plates, 8 replicates in each plat	e. CV(%)
= SD/meanX100	
Intra-Assay: CV<10%

Application Details	
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
