

Datasheet for ABIN5657419 **NLRP3 CLIA Kit**

[Go to Product page](#)

Overview

| | |
|--------------------------|----------------------------|
| Quantity: | 96 tests |
| Target: | NLRP3 |
| Reactivity: | Human |
| Method Type: | Sandwich ELISA |
| Detection Range: | 781.25 pg/mL - 50000 pg/mL |
| Minimum Detection Limit: | 781.25 pg/mL |
| Application: | ELISA |

Product Details

| | |
|--------------------|---|
| Sample Type: | Cell Lysate, Tissue Homogenate |
| Analytical Method: | Quantitative |
| Detection Method: | Chemiluminescent |
| Specificity: | This assay has high sensitivity and excellent specificity for detection of NLR Family, Pyrin Domain Containing Protein 3 (NLRP3). No significant cross-reactivity or interference between NLR Family, Pyrin Domain Containing Protein 3 (NLRP3) and analogues was observed. |
| Sensitivity: | 27.5 pg/mL |

Target Details

| | |
|-------------------|--|
| Target: | NLRP3 |
| Alternative Name: | NLR Family, Pyrin Domain Containing Protein 3 (NLRP3 Products) |

Target Details

Background: Gene Name: NLR Family, Pyrin Domain Containing Protein 3
Gene Aliases: AVP, AGTAVPRL, AII, AII/AVP, C1orf7, CIAS1, CLR1.1, FCAS, FCU, MWS, NALP3, PYPAF1, Cryopyrin, Cold Induced Autoinflammatory Syndrome 1, Caterpillar-Like Receptor 1.1

Pathways: [Cellular Response to Molecule of Bacterial Origin](#), [Positive Regulation of Endopeptidase Activity](#), [Inflammasome](#)

Application Details

Comment: The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5 % within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

Assay Time: 2 - 3 h

Plate: Pre-coated

Protocol: The microplate provided in this kit has been pre-coated with an antibody specific to NLR Family, Pyrin Domain Containing Protein 3 (NLRP3). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to NLR Family, Pyrin Domain Containing Protein 3 (NLRP3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the NLR Family, Pyrin Domain Containing Protein 3 (NLRP3) level in the sample or standard.,

Assay Precision: Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level NLR Family, Pyrin Domain Containing Protein 3 (NLRP3) were tested 20 times on one plate, respectively
Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level NLR Family, Pyrin Domain Containing Protein 3 (NLRP3) were tested on 3 different plates, 8 replicates in each plate. $CV(\%) = SD/mean \times 100$
Intra-Assay: $CV < 10\%$
Inter-Assay: $CV < 12\%$

Restrictions: For Research Use only

Handling

| | |
|------------------|--|
| Handling Advice: | Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption. |
| Storage: | 4 °C,-20 °C |
| Storage Comment: | -20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles. |
| Expiry Date: | 4-8 months |
