

Datasheet for ABIN5657441 NUDC ELISA Kit

Overview

Quantity:	96 tests
Target:	NUDC
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Nuclear Distribution Gene C Homolog (NUDC). No significant cross-reactivity or interference between Nuclear Distribution Gene C Homolog (NUDC) and analogues was observed.
Sensitivity:	0.058 ng/mL
Target Details	
Target:	NUDC

Alternative Name:	Nuclear Distribution Gene C Homolog (NUDC Products)

Target Details		
Background:	Gene Name: Nuclear Distribution Gene C Homolog	
	Gene Aliases: HNUDC, MNUDC, NPD011	
Gene ID:	10726	
UniProt:	Q9Y266	
Application Details		
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Nuclear Distribution Gene C	
	Homolog (NUDC). Standards or samples are then added to the appropriate microtiter plate	
	wells with a biotin-conjugated antibody specific to Nuclear Distribution Gene C Homolog	
	(NUDC). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate	
	well and incubated. After TMB substrate solution is added, only those wells that contain	
	Nuclear Distribution Gene C Homolog (NUDC), biotin-conjugated antibody and enzyme-	
	conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by	
	the addition of sulphuric acid solution and the color change is measured	
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Nuclear	
	Distribution Gene C Homolog (NUDC) in the samples is then determined by comparing the O.D.	
	of the samples to the standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Nuclear Distribution Gene C Homolog (NUDC) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Nuclear Distribution Gene C Homolog (NUDC) were tested on 3 different plates, 8 replicates in	
	each plate. CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
