

Datasheet for ABIN5657569 OCIAD2 ELISA Kit

Overview

Quantity:	96 tests
Target:	OCIAD2
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Ovarian Cancer Immuno Reactive Antigen Domain Containing Protein 2 (OCIAD2). No significant cross- reactivity or interference between Ovarian Cancer Immuno Reactive Antigen Domain Containing Protein 2 (OCIAD2) and analogues was observed.
Sensitivity:	0.112 ng/mL

Target Details

Target:	OCIAD2
Alternative Name:	Ovarian Cancer Immuno Reactive Antigen Domain Containing Protein 2 (OCIAD2 Products)

Background:	Gene Name: Ovarian Cancer Immuno Reactive Antigen Domain Containing Protein 2
	Gene Aliases: OCIA Domain Containing 2, Ovarian carcinoma immunoreactive antigen-like
	protein
Gene ID:	132299
UniProt:	Q56VL3
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Ovarian Cancer Immuno
	Reactive Antigen Domain Containing Protein 2 (OCIAD2). Standards or samples are then added
	to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Ovarian
	Cancer Immuno Reactive Antigen Domain Containing Protein 2 (OCIAD2). Next, Avidin
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	After TMB substrate solution is added, only those wells that contain Ovarian Cancer Immuno
	Reactive Antigen Domain Containing Protein 2 (OCIAD2), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Ovarian
	Cancer Immuno Reactive Antigen Domain Containing Protein 2 (OCIAD2) in the samples is ther
	determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Ovarian Cancer Immuno Reactive Antigen Domain Containing Protein 2 (OCIAD2) were tested
	20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Ovarian Cancer Immuno Reactive Antigen Domain Containing Protein 2 (OCIAD2) were tested
	on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100

Application Details	
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
