

Datasheet for ABIN5657774 **PFKL ELISA Kit**

Overview

Quantity:	96 tests
Target:	PFKL
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	1.56 ng/mL - 100 ng/mL
Minimum Detection Limit:	1.56 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Phosphofructokinase, Liver (PFKL). No significant cross-reactivity or interference between Phosphofructokinase, Liver (PFKL) and analogues was observed.
Sensitivity:	0.67 ng/mL
Target Details	
Target:	PFKL
Alternative Name:	Phosphofructokinase, Liver (PFKL Products)

Target Details	
Background:	Gene Name: Phosphofructokinase, Liver
	Gene Aliases: PFK-B, 6-phosphofructokinase type B, Phosphofructo-1-kinase isozyme B,
	Phosphohexokinase
Gene ID:	25741
UniProt:	P30835
Pathways:	Negative Regulation of Hormone Secretion, Warburg Effect

Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Phosphofructokinase, Liver
	(PFKL). Standards or samples are then added to the appropriate microtiter plate wells with a
	biotin-conjugated antibody specific to Phosphofructokinase, Liver (PFKL). Next, Avidin
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	After TMB substrate solution is added, only those wells that contain Phosphofructokinase, Liver
	(PFKL), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color.
	The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the
	color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The
	concentration of Phosphofructokinase, Liver (PFKL) in the samples is then determined by
	comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Phosphofructokinase, Liver (PFKL) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Phosphofructokinase, Liver (PFKL) were tested on 3 different plates, 8 replicates in each plate.
	CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%

Application Details	
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
