

Datasheet for ABIN5657915 PDGFA ELISA Kit

Overview

Quantity:	96 tests
Target:	PDGFA
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	78.12 pg/mL - 5000 pg/mL
Minimum Detection Limit:	78.12 pg/mL
Application:	ELISA

Product Details

Alternative Name:

Sample Type:	Plasma, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Platelet Derived Growth Factor Subunit A (PDGFA). No significant cross-reactivity or interference between Platelet Derived Growth Factor Subunit A (PDGFA) and analogues was observed.
Sensitivity:	32 pg/mL
Target Details	
Target:	PDGFA

Platelet Derived Growth Factor Subunit A (PDGFA Products)

Target Details	
Background:	Gene Name: Platelet Derived Growth Factor Subunit A
	Gene Aliases: PDGF-A, PDGF1, Platelet Derived Growth Factor Alpha Polypeptide
Pathways:	RTK Signaling, Fc-epsilon Receptor Signaling Pathway, EGFR Signaling Pathway, Neurotrophin
	Signaling Pathway, Smooth Muscle Cell Migration, Platelet-derived growth Factor Receptor
	Signaling
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Platelet Derived Growth
	Factor Subunit A (PDGFA). Standards or samples are then added to the appropriate microtiter
	plate wells with a biotin-conjugated antibody specific to Platelet Derived Growth Factor Subunit
	A (PDGFA). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each
	microplate well and incubated. After TMB substrate solution is added, only those wells that
	contain Platelet Derived Growth Factor Subunit A (PDGFA), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Platelet
	Derived Growth Factor Subunit A (PDGFA) in the samples is then determined by comparing the
	O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Platelet Derived Growth Factor Subunit A (PDGFA) were tested 20 times on one plate,
	respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Platelet Derived Growth Factor Subunit A (PDGFA) were tested on 3 different plates, 8 replicates
	in each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%

Application Details		
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only	
Handling		
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
