POLD1 ELISA Kit

_					
	W	0	rv	10	W

Quantity:	96 tests
Target:	POLD1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Polymerase DNA Directed Delta 1 (POLd). No significant cross-reactivity or interference between Polymerase DNA Directed Delta 1 (POLd) and analogues was observed.
Sensitivity:	0.054 ng/mL

Target Details

Target:	POLD1
Alternative Name:	Polymerase DNA Directed Delta 1 (POLD1 Products)

Target Details

Target Details			
Background:	Gene Name: Polymerase DNA Directed Delta 1		
	Gene Aliases: CDC2, POLD1, DNA polymerase subunit delta p125		
Gene ID:	5424		
UniProt:	P28340		
Pathways:	Telomere Maintenance, DNA Damage Repair, DNA Replication, Chromatin Binding, Synthesis o		
	DNA		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5 % within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to Polymerase DNA Directed		
	Delta 1 (POLd). Standards or samples are then added to the appropriate microtiter plate wells		
	with a biotin-conjugated antibody specific to Polymerase DNA Directed Delta 1 (POLd). Next,		
	Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and		
	incubated. After TMB substrate solution is added, only those wells that contain Polymerase		
	DNA Directed Delta 1 (POLd), biotin-conjugated antibody and enzyme-conjugated Avidin will		
	exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of		
	sulphuric acid solution and the color change is measured spectrophotometrically at a		
	wavelength of 450pm + 10pm. The concentration of Dalumaraca DNA Directed Dalta 1 (DOI d)		

Assay Precision:

Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Polymerase DNA Directed Delta 1 (POLd) were tested 20 times on one plate, respectively Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Polymerase DNA Directed Delta 1 (POLd) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10% Inter-Assay: CV<12%

wavelength of 450nm ± 10nm. The concentration of Polymerase DNA Directed Delta 1 (POLd) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

Application Details

Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at
	4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant
	pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
