

## Datasheet for ABIN5658244

### **GADD34 ELISA Kit**

[Go to Product page](#)

#### Overview

Quantity:	96 tests
Target:	GADD34 (PPP1R15A)
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

#### Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A). No significant cross-reactivity or interference between Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A) and analogues was observed.
Sensitivity:	0.118 ng/mL

#### Target Details

Target:	GADD34 (PPP1R15A)
Alternative Name:	Protein Phosphatase 1, Regulatory Subunit 15A ( <a href="#">PPP1R15A Products</a> )

## Target Details

---

Background:	Gene Name: Protein Phosphatase 1, Regulatory Subunit 15A Gene Aliases: PPP1-R15A, PPP1R15-A, PPP1-R15-A, GADD34, Growth Arrest And DNA-Damage-Inducible 34, Myeloid differentiation primary response protein MyD116 homolog
Gene ID:	171071
UniProt:	<a href="#">Q6IN02</a>
Pathways:	<a href="#">ER-Nucleus Signaling</a> , <a href="#">Unfolded Protein Response</a>

## Application Details

---

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5 % within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A) were tested 20 times on one plate, respectively  Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Protein Phosphatase 1, Regulatory Subunit 15A (PPP1R15A) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100

## Application Details

---

Intra-Assay: CV<10%

Inter-Assay: CV<12%

---

Restrictions: For Research Use only

---

## Handling

---

Handling Advice: The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.

---

Storage: 4 °C,-20 °C

---

Storage Comment: -20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.

---

Expiry Date: 4-8 months

---
