

### Datasheet for ABIN5658487

# **ARHGDIB ELISA Kit**

#### Overview

Quantity:	96 tests
Target:	ARHGDIB
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.625 ng/mL - 40 ng/mL
Minimum Detection Limit:	0.625 ng/mL
Application:	ELISA

### **Product Details**

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Rho GDP Dissociation Inhibitor Beta (ARHGDIb). No significant cross-reactivity or interference between Rho GDP Dissociation Inhibitor Beta (ARHGDIb) and analogues was observed.
Sensitivity:	0.241 ng/mL

# **Target Details**

Target:	ARHGDIB
Alternative Name:	Rho GDP Dissociation Inhibitor Beta (ARHGDIB Products)

# **Target Details**

- Target Details	
Background:	Gene Name: Rho GDP Dissociation Inhibitor Beta
	Gene Aliases: D4, GDIA2, GDID4, LYGDI, Ly-GDI, RAP1GN1, RhoGDI2
Gene ID:	397
UniProt:	P52566
Pathways:	Caspase Cascade in Apoptosis
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Rho GDP Dissociation
	Inhibitor Beta (ARHGDIb). Standards or samples are then added to the appropriate microtiter
	plate wells with a biotin-conjugated antibody specific to Rho GDP Dissociation Inhibitor Beta
	(ARHGDIb). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each
	microplate well and incubated. After TMB substrate solution is added, only those wells that
	contain Rho GDP Dissociation Inhibitor Beta (ARHGDIb), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Rho GDP
	Dissociation Inhibitor Beta (ARHGDIb) in the samples is then determined by comparing the O.D.
	of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Rho
	GDP Dissociation Inhibitor Beta (ARHGDIb) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Rho GDP Dissociation Inhibitor Beta (ARHGDIb) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%

# **Application Details**

Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and
	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at
	4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant
	pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
