

Datasheet for ABIN5658533 RUNX3 ELISA Kit

Overview

Quantity:	96 tests
Target:	RUNX3
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Runt Related Transcription Factor 3 (RUNX3). No significant cross-reactivity or interference between Runt Related Transcription Factor 3 (RUNX3) and analogues was observed.
Sensitivity:	0.054 ng/mL
Target Details	

Target:	RUNX3	
Alternative Name:	Runt Related Transcription Factor 3 (RUNX3 Products)

Target Details	
Background:	Gene Name: Runt Related Transcription Factor 3
	Gene Aliases: AML2, CBFA3, PEBP2aC, PEBP2A3, Acute myeloid leukemia 2 protein, Core-
	binding factor subunit alpha-3, Polyomavirus enhancer-binding protein 2 alpha C subunit

Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than	
	5 % within the expiration date under appropriate storage condition. To minimize extra influence	
	on the performance, operation procedures and lab conditions, especially room temperature, air	
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that	
	the whole assay is performed by the same operator from the beginning to the end.	
Assay Time:	3 h	
Plate:	Pre-coated	
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate	
	provided in this kit has been pre-coated with an antibody specific to Runt Related Transcription	
	Factor 3 (RUNX3). Standards or samples are then added to the appropriate microtiter plate	
	wells with a biotin-conjugated antibody specific to Runt Related Transcription Factor 3	
	(RUNX3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate	
	well and incubated. After TMB substrate solution is added, only those wells that contain Runt	
	Related Transcription Factor 3 (RUNX3), biotin-conjugated antibody and enzyme-conjugated	
	Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the	
	addition of sulphuric acid solution and the color change is measured spectrophotometrically at	
	a wavelength of 450nm \pm 10nm. The concentration of Runt Related Transcription Factor 3	
	(RUNX3) in the samples is then determined by comparing the O.D. of the samples to the	
	standard curve.	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level	
	Runt Related Transcription Factor 3 (RUNX3) were tested 20 times on one plate, respectively	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level	
	Runt Related Transcription Factor 3 (RUNX3) were tested on 3 different plates, 8 replicates in	
	each plate. CV(%) = SD/meanX100	
	Intra-Assay: CV<10%	
	Inter-Assay: CV<12%	
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
