

Datasheet for ABIN5658547

S100A10 ELISA Kit

Overview

Quantity:	96 tests
Target:	S100A10
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	31.25 pg/mL - 2000 pg/mL
Minimum Detection Limit:	31.25 pg/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of S100 Calcium Binding Protein A10 (S100A10). No significant cross-reactivity or interference between S100 Calcium Binding Protein A10 (S100A10) and analogues was observed.
Sensitivity:	12.9 pg/mL

Target Details

Target:	S100A10
Alternative Name:	S100 Calcium Binding Protein A10 (S100A10 Products)

Target Details

rarget Detailo	
Background:	Gene Name: S100 Calcium Binding Protein A10
	Gene Aliases: ANX2L, ANX2LG, CAL1L, CLP11, GP11, P11, P10, Calpactin-1 light chain, Cellular
	ligand of annexin II, Annexin II Ligand, Calpactin I, Light Polypeptide
Gene ID:	20194
UniProt:	P08207
Pathways:	S100 Proteins
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5% within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to S100 Calcium Binding
	Protein A10 (S100A10). Standards or samples are then added to the appropriate microtiter
	plate wells with a biotin-conjugated antibody specific to S100 Calcium Binding Protein A10
	(S100A10). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each
	microplate well and incubated. After TMB substrate solution is added, only those wells that
	contain S100 Calcium Binding Protein A10 (S100A10), biotin-conjugated antibody and enzyme-
	conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by
	the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of S100 Calcium
	Binding Protein A10 (S100A10) in the samples is then determined by comparing the O.D. of the
	samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	S100 Calcium Binding Protein A10 (S100A10) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	S100 Calcium Binding Protein A10 (S100A10) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%

Application Details

	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
