| Quantity: | 96 tests | |
|--------------------------|--------------------------|--|
| Target: | SCGN | |
| Reactivity: | Human | |
| Method Type: | Sandwich ELISA | |
| Detection Range: | 31.25 pg/mL - 2000 pg/mL | |
| Minimum Detection Limit: | 31.25 pg/mL | |
| Application: | ELISA | |

Product Details

| Sample Type: | Plasma, Serum, Tissue Homogenate | |
|--------------------|--|--|
| Analytical Method: | Quantitative | |
| Detection Method: | Colorimetric | |
| Specificity: | This assay has high sensitivity and excellent specificity for detection of Secretagogin (SCGN). No significant cross-reactivity or interference between Secretagogin (SCGN) and analogues was observed. | |
| Sensitivity: | 12.7 pg/mL | |

Target Details

| Target: | SCGN |
|-------------------|------------------------------|
| Alternative Name: | Secretagogin (SCGN Products) |

Target Details

| Background: | Gene Name: Secretagogin | | |
|---------------------|---|--|--|
| | Gene Aliases: SECRET, SEGN, CALBL, Calbindin-Like, Secretagogin, EF-Hand Calcium Binding | | |
| | Protein | | |
| Gene ID: | 10590 | | |
| UniProt: | 076038 | | |
| Application Details | | | |
| Comment: | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than | | |
| | 5 % within the expiration date under appropriate storage condition. To minimize extra influence | | |
| | on the performance, operation procedures and lab conditions, especially room temperature, air | | |
| | humidity, incubator temperature should be strictly controlled. It is also strongly suggested that | | |
| | the whole assay is performed by the same operator from the beginning to the end. | | |
| Assay Time: | 3 h | | |
| Plate: | Pre-coated | | |
| Protocol: | The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate | | |
| | provided in this kit has been pre-coated with an antibody specific to Secretagogin (SCGN). | | |
| | Standards or samples are then added to the appropriate microtiter plate wells with a biotin- | | |
| | conjugated antibody specific to Secretagogin (SCGN). Next, Avidin conjugated to Horseradish | | |
| | Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution | | |
| | is added, only those wells that contain Secretagogin (SCGN), biotin-conjugated antibody and | | |
| | enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is | | |
| | terminated by the addition of sulphuric acid solution and the color change is measured | | |
| | spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Secretagogin | | |
| | (SCGN) in the samples is then determined by comparing the O.D. of the samples to the | | |
| | standard curve. | | |
| Assay Precision: | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level | | |
| | Secretagogin (SCGN) were tested 20 times on one plate, respectively | | |
| | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level | | |
| | Secretagogin (SCGN) were tested on 3 different plates, 8 replicates in each plate. CV(%) = | | |
| | SD/meanX100 | | |
| | Intra-Assay: CV<10% | | |
| | Inter-Assay: CV<12% | | |
| Restrictions: | For Research Use only | | |
| | | | |

Handling

| Handling Advice: | The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and | |
|------------------|--|--|
| | specimen samples should be assayed in duplicate. Once the procedure has been started, all | |
| | steps should be completed without interruption. | |
| Storage: | 4 °C,-20 °C | |
| Storage Comment: | -20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles. | |
| Expiry Date: | 4-8 months | |
