

Datasheet for ABIN5658696 SEMA3C ELISA Kit

Overview

Quantity:	96 tests
Target:	SEMA3C
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	15.62 pg/mL - 1000 pg/mL
Minimum Detection Limit:	15.62 pg/mL
Application:	ELISA

Product Details

Plasma, Serum, Tissue Homogenate	
Quantitative	
Colorimetric	
This assay has high sensitivity and excellent specificity for detection of Semaphorin 3C (SEMA3C). No significant cross-reactivity or interference between Semaphorin 3C (SEMA3C) and analogues was observed.	
6.8 pg/mL	
SEMA3C	

Alternative Name:	Semaphorin 3C (SEMA3C Products)

Target Details	
Background:	Gene Name: Semaphorin 3C
	Gene Aliases: SEMAE, SemE, Semaphorin-E, Sema Domain,Immunoglobulin
	Domain(Ig),Transmembrane Domain(TM)and Short Cytoplasmic Domain 3C
Gene ID:	10512
UniProt:	Q99985
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Semaphorin 3C (SEMA3C)
	Standards or samples are then added to the appropriate microtiter plate wells with a biotin-
	conjugated antibody specific to Semaphorin 3C (SEMA3C). Next, Avidin conjugated to
	Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB
	substrate solution is added, only those wells that contain Semaphorin 3C (SEMA3C), biotin-
	conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-
	substrate reaction is terminated by the addition of sulphuric acid solution and the color change
	is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of
	Semaphorin 3C (SEMA3C) in the samples is then determined by comparing the O.D. of the
	samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Semaphorin 3C (SEMA3C) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Semaphorin 3C (SEMA3C) were tested on 3 different plates, 8 replicates in each plate. $CV(\%)$ =
	SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
