

## Datasheet for ABIN5658858 SLC16A3 ELISA Kit

Go to Product page

Overview

Quantity:	96 tests
Target:	SLC16A3
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.781 ng/mL - 50 ng/mL
Minimum Detection Limit:	0.781 ng/mL
Application:	ELISA

## Product Details

Sample Type:	Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Solute Carrier Family 16, Member 3 (SLC16A3). No significant cross-reactivity or interference between Solute Carrier Family 16, Member 3 (SLC16A3) and analogues was observed.	
Sensitivity:	0.28 ng/mL	
Target Details		
Target:	SLC16A3	
Alternative Name:	Solute Carrier Family 16, Member 3 (SLC16A3 Products)

Target Details	
Background:	Gene Name: Solute Carrier Family 16, Member 3
	Gene Aliases: MCT4, Monocarboxylic Acid Transporter 4, Monocarboxylate Transporter 4
Pathways:	Warburg Effect
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, ai
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Solute Carrier Family 16,
	Member 3 (SLC16A3). Standards or samples are then added to the appropriate microtiter plate
	wells with a biotin-conjugated antibody specific to Solute Carrier Family 16, Member 3
	(SLC16A3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each
	microplate well and incubated. After TMB substrate solution is added, only those wells that
	contain Solute Carrier Family 16, Member 3 (SLC16A3), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Solute Carrie
	Family 16, Member 3 (SLC16A3) in the samples is then determined by comparing the O.D. of
	the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Solute Carrier Family 16, Member 3 (SLC16A3) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Solute Carrier Family 16, Member 3 (SLC16A3) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
