SULF2 ELISA Kit

_				
	۱۱ / ۱	rv		۱۸/
	' V '	 ı v	Ι.	v v

Quantity:	96 tests
Target:	SULF2
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Sulfatase 2 (SULF2). No significant cross-reactivity or interference between Sulfatase 2 (SULF2) and analogues was observed.
Sensitivity:	0.121 ng/mL

Target Details

Target:	SULF2
Alternative Name:	Sulfatase 2 (SULF2 Products)

Target Details

Background:	Gene Name: Sulfatase 2		
	Gene Aliases: HSULF-2, Extracellular sulfatase Sulf-2		
Gene ID:	55959		
UniProt:	Q8IWU5		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5% within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to Sulfatase 2 (SULF2).		
	Standards or samples are then added to the appropriate microtiter plate wells with a biotin-		
	conjugated antibody specific to Sulfatase 2 (SULF2). Next, Avidin conjugated to Horseradish		
	Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution		
	is added, only those wells that contain Sulfatase 2 (SULF2), biotin-conjugated antibody and		
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is		
	terminated by the addition of sulphuric acid solution and the color change is measured		
	spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Sulfatase 2		
	(SULF2) in the samples is then determined by comparing the O.D. of the samples to the		
	standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	Sulfatase 2 (SULF2) were tested 20 times on one plate, respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	Sulfatase 2 (SULF2) were tested on 3 different plates, 8 replicates in each plate. $CV(\%)$ =		
	SD/meanX100		
	Intra-Assay: CV<10%		
	Inter-Assay: CV<12%		
Restrictions:	For Research Use only		

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and	
	specimen samples should be assayed in duplicate. Once the procedure has been started, all	
	steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
