

## Datasheet for ABIN5659071 SDCBP2 ELISA Kit

Overview

Quantity:	96 tests
Target:	SDCBP2
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.156 ng/mL - 10 ng/mL
Minimum Detection Limit:	0.156 ng/mL
Application:	ELISA

## Product Details

Sample Type: Plasma, Serum, Tissue Homogenate	
Sample Type.	
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Syntenin 2 (ST2). No significant cross-reactivity or interference between Syntenin 2 (ST2) and analogues was observed.
Sensitivity:	0.065 ng/mL
Target Details	

Target:	SDCBP2
Alternative Name:	Syntenin 2 (SDCBP2 Products)

Target Details	
Background:	Gene Name: Syntenin 2
	Gene Aliases: SDCBP2, SITAC18, Syndecan Binding Protein 2
Gene ID:	27111
UniProt:	Q9H190
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Syntenin 2 (ST2).
	Standards or samples are then added to the appropriate microtiter plate wells with a biotin-
	conjugated antibody specific to Syntenin 2 (ST2). Next, Avidin conjugated to Horseradish
	Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution
	is added, only those wells that contain Syntenin 2 (ST2), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Syntenin 2
	(ST2) in the samples is then determined by comparing the O.D. of the samples to the standard
	curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Syntenin 2 (ST2) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Syntenin 2 (ST2) were tested on 3 different plates, 8 replicates in each plate. $CV(\%)$ =
	SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
