

# Datasheet for ABIN5659103 TBC1D13 ELISA Kit

Overview

Quantity:	96 tests
Target:	TBC1D13
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

#### Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of TBC1 Domain Family, Member 13 (TBC1D13). No significant cross-reactivity or interference between TBC1 Domain Family, Member 13 (TBC1D13) and analogues was observed.
Sensitivity:	0.122 ng/mL
Target Details	
Target:	TBC1D13
Alternative Name:	TBC1 Domain Family, Member 13 (TBC1D13 Products)

### Target Details

#### Background:

Gene Name: TBC1 Domain Family, Member 13

## Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to TBC1 Domain Family,
	Member 13 (TBC1D13). Standards or samples are then added to the appropriate microtiter
	plate wells with a biotin-conjugated antibody specific to TBC1 Domain Family, Member 13
	(TBC1D13). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each
	microplate well and incubated. After TMB substrate solution is added, only those wells that
	contain TBC1 Domain Family, Member 13 (TBC1D13), biotin-conjugated antibody and enzyme-
	conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by
	the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of TBC1 Domain
	Family, Member 13 (TBC1D13) in the samples is then determined by comparing the O.D. of the
	samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	TBC1 Domain Family, Member 13 (TBC1D13) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	TBC1 Domain Family, Member 13 (TBC1D13) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and

	specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
