

Datasheet for ABIN5659480 TRPA1 ELISA Kit

Overview

Quantity:	96 tests
Target:	TRPA1
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.625 ng/mL - 40 ng/mL
Minimum Detection Limit:	0.625 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Transient Receptor Potential Cation Channel Subfamily A, Member 1 (TRPA1). No significant cross-reactivity or interference between Transient Receptor Potential Cation Channel Subfamily A, Member 1 (TRPA1) and analogues was observed.
Sensitivity:	0.251 ng/mL

Target Details

Target:	TRPA1
Alternative Name:	Transient Receptor Potential Cation Channel Subfamily A, Member 1 (TRPA1 Products)

Target Details	
Background:	Gene Name: Transient Receptor Potential Cation Channel Subfamily A, Member 1
	Gene Aliases: ANKTM1, Ankyrin-like with transmembrane domains protein 1, Transformation-
	sensitive protein p120
Gene ID:	8989
JniProt:	075762
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Transient Receptor
	Potential Cation Channel Subfamily A, Member 1 (TRPA1). Standards or samples are then
	added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to
	Transient Receptor Potential Cation Channel Subfamily A, Member 1 (TRPA1). Next, Avidin
	conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated.
	After TMB substrate solution is added, only those wells that contain Transient Receptor
	Potential Cation Channel Subfamily A, Member 1 (TRPA1), biotin-conjugated antibody and
	enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Transient
	Receptor Potential Cation Channel Subfamily A, Member 1 (TRPA1) in the samples is then
	determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Transient Receptor Potential Cation Channel Subfamily A, Member 1 (TRPA1) were tested 20
	times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Transient Receptor Potential Cation Channel Subfamily A, Member 1 (TRPA1) were tested on 3
	different plates, 8 replicates in each plate. CV(%) = SD/meanX100

Application Details	
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all
	steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
