TNNI2 ELISA Kit

_					
	W	0	rv	10	W

Quantity:	96 tests
Target:	TNNI2
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Detection Range:	15.62 pg/mL - 1000 pg/mL
Minimum Detection Limit:	15.62 pg/mL
Application:	ELISA

Product Details

Sample Type:	Plasma, Serum, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Troponin I Type 2, Fast Skeletal (TNNI2). No significant cross-reactivity or interference between Troponin I Type 2, Fast Skeletal (TNNI2) and analogues was observed.	
Sensitivity:	5.6 pg/mL	

Target Details

Target:	TNNI2	
Alternative Name:	Troponin I Type 2, Fast Skeletal (TNNI2 Products)	

Target Details

Background:	Gene Name: Troponin I Type 2, Fast Skeletal		
	Gene Aliases: AMCD2B, DA2B, FSSV, Troponin I Fast Twitch 2, Troponin I, fast-twitch isoform		
Gene ID:	21953		
UniProt:	P13412		
Application Details			
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than		
	5 % within the expiration date under appropriate storage condition. To minimize extra influence		
	on the performance, operation procedures and lab conditions, especially room temperature, air		
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that		
	the whole assay is performed by the same operator from the beginning to the end.		
Assay Time:	3 h		
Plate:	Pre-coated		
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate		
	provided in this kit has been pre-coated with an antibody specific to Troponin I Type 2, Fast		
	Skeletal (TNNI2). Standards or samples are then added to the appropriate microtiter plate wells		
	with a biotin-conjugated antibody specific to Troponin I Type 2, Fast Skeletal (TNNI2). Next,		
	Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and		
	incubated. After TMB substrate solution is added, only those wells that contain Troponin I Type		
	2, Fast Skeletal (TNNI2), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit		
	change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid		
	solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm		
	10nm. The concentration of Troponin I Type 2, Fast Skeletal (TNNI2) in the samples is then		
	determined by comparing the O.D. of the samples to the standard curve.		
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level		
	Troponin I Type 2, Fast Skeletal (TNNI2) were tested 20 times on one plate, respectively		
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level		
	Troponin I Type 2, Fast Skeletal (TNNI2) were tested on 3 different plates, 8 replicates in each		
	plate. CV(%) = SD/meanX100		
	Intra-Assay: CV<10%		
	Inter-Assay: CV<12%		
Restrictions:	For Research Use only		

Handling

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and	
	specimen samples should be assayed in duplicate. Once the procedure has been started, all	
	steps should be completed without interruption.	
Storage:	4 °C,-20 °C	
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.	
Expiry Date:	4-8 months
