

# Datasheet for ABIN5659849 VEGF189 ELISA Kit

Overview

Quantity:	96 tests
Target:	VEGF189
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	15.62 pg/mL - 1000 pg/mL
Minimum Detection Limit:	15.62 pg/mL
Application:	ELISA

#### Product Details

Sample Type:	Cell Culture Supernatant, Cell Lysate, Plasma, Serum, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Vascular Endothelial Growth Factor 189 (VEGF189). No significant cross-reactivity or interference between Vascular Endothelial Growth Factor 189 (VEGF189) and analogues was observed.	
Sensitivity:	5.9 pg/mL	
Target Details		
Target:	VEGF189	
Alternative Name:	Vascular Endothelial Growth Factor 189 (VEGF189 Products)

### Target Details

#### Background:

Gene Name: Vascular Endothelial Growth Factor 189

## Application Details

Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Vascular Endothelial
	Growth Factor 189 (VEGF189). Standards or samples are then added to the appropriate
	microtiter plate wells with a biotin-conjugated antibody specific to Vascular Endothelial Growth
	Factor 189 (VEGF189). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to
	each microplate well and incubated. After TMB substrate solution is added, only those wells
	that contain Vascular Endothelial Growth Factor 189 (VEGF189), biotin-conjugated antibody
	and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is
	terminated by the addition of sulphuric acid solution and the color change is measured
	spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Vascular
	Endothelial Growth Factor 189 (VEGF189) in the samples is then determined by comparing the
	O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level
	Vascular Endothelial Growth Factor 189 (VEGF189) were tested 20 times on one plate,
	respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	Vascular Endothelial Growth Factor 189 (VEGF189) were tested on 3 different plates, 8
	replicates in each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%
Restrictions:	For Research Use only

Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
