

Datasheet for ABIN5660045

WWP2 ELISA Kit

	er		

Quantity:	96 tests
Target:	WWP2
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.781 ng/mL - 50 ng/mL
Minimum Detection Limit:	0.781 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of WW Domain Containing E3 Ubiquitin Protein Ligase 2 (WWP2). No significant cross-reactivity or interference between WW Domain Containing E3 Ubiquitin Protein Ligase 2 (WWP2) and analogues was observed.
Sensitivity:	0.27 ng/mL

Target Details

Target:	WWP2
Alternative Name:	WW Domain Containing E3 Ubiquitin Protein Ligase 2 (WWP2 Products)

Target Details

- Target Details	
Background:	Gene Name: WW Domain Containing E3 Ubiquitin Protein Ligase 2
	Gene Aliases: AIP2, WWp2-like, Atrophin-1-interacting protein 2, NEDD4-like E3 ubiquitin-protein
	ligase WWP2
Gene ID:	11060
UniProt:	000308
Pathways:	Negative Regulation of Transporter Activity
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to WW Domain Containing E3
	Ubiquitin Protein Ligase 2 (WWP2). Standards or samples are then added to the appropriate
	microtiter plate wells with a biotin-conjugated antibody specific to WW Domain Containing E3
	Ubiquitin Protein Ligase 2 (WWP2). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is
	added to each microplate well and incubated. After TMB substrate solution is added, only those
	wells that contain WW Domain Containing E3 Ubiquitin Protein Ligase 2 (WWP2), biotin-
	conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-
	substrate reaction is terminated by the addition of sulphuric acid solution and the color change
	is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of
	WW Domain Containing E3 Ubiquitin Protein Ligase 2 (WWP2) in the samples is then
	determined by comparing the O.D. of the samples to the standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level WW
	Domain Containing E3 Ubiquitin Protein Ligase 2 (WWP2) were tested 20 times on one plate,
	respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
	WW Domain Containing E3 Ubiquitin Protein Ligase 2 (WWP2) were tested on 3 different plates
	8 replicates in each plate. CV(%) = SD/meanX100

Application Details

	Intra-Assay: CV<10% Inter-Assay: CV<12%
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
