

Datasheet for ABIN5660056 XRCC6 ELISA Kit

Go to Product page

Overview

Quantity:	96 tests
Target:	XRCC6
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA

Product Details

Sample Type:	Cell Lysate, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of X-Ray Repair Cross Complementing 6 (XRCC6). No significant cross-reactivity or interference between X-Ray Repair Cross Complementing 6 (XRCC6) and analogues was observed.
Sensitivity:	0.122 ng/mL
Target Details	
—	VD007

Target:	XRCC6
Alternative Name:	X-Ray Repair Cross Complementing 6 (XRCC6 Products)

Background:	Gene Name: X-Ray Repair Cross Complementing 6
	Gene Aliases: Ku70, CTC75, CTCBF, G22P1, ML8, TLAA, Lupus Ku Autoantigen Protein P70,
	ATP-Dependent DNA Helicase 2 Subunit 1, CTC box-binding factor 75 kDa, Thyroid-lupus
	autoantigen
Pathways:	DNA Damage Repair
Application Details	
Comment:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	5 % within the expiration date under appropriate storage condition. To minimize extra influence
	on the performance, operation procedures and lab conditions, especially room temperature, air
	humidity, incubator temperature should be strictly controlled. It is also strongly suggested that
	the whole assay is performed by the same operator from the beginning to the end.
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to X-Ray Repair Cross
	Complementing 6 (XRCC6). Standards or samples are then added to the appropriate microtiter
	plate wells with a biotin-conjugated antibody specific to X-Ray Repair Cross Complementing 6
	(XRCC6). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplat
	well and incubated. After TMB substrate solution is added, only those wells that contain X-Ray
	Repair Cross Complementing 6 (XRCC6), biotin-conjugated antibody and enzyme-conjugated
	Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the
	addition of sulphuric acid solution and the color change is measured spectrophotometrically a
	a wavelength of 450nm \pm 10nm. The concentration of X-Ray Repair Cross Complementing 6
	(XRCC6) in the samples is then determined by comparing the O.D. of the samples to the
	standard curve.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level X-
	Ray Repair Cross Complementing 6 (XRCC6) were tested 20 times on one plate, respectively
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level X-
	Ray Repair Cross Complementing 6 (XRCC6) were tested on 3 different plates, 8 replicates in
	each plate. CV(%) = SD/meanX100
	Intra-Assay: CV<10%
	Inter-Assay: CV<12%

Application Details	
Restrictions:	For Research Use only
Handling	
Handling Advice:	The Stop Solution is acidic. Do not allow to contact skin or eyes. Calibrators, controls and specimen samples should be assayed in duplicate. Once the procedure has been started, all steps should be completed without interruption.
Storage:	4 °C,-20 °C
Storage Comment:	-20°C. Bring all reagents to room temperature before beginning test. The kit may be stored at 4°C for immediate use within two days upon arrival. Reseal any unused strips with desiccant pack. Minimize freeze/thaw cycles.
Expiry Date:	4-8 months
