Background:	Synonyms: Metalloendopeptidase OMA1, mitochondrial, OMA1, Metalloprotease-related protein		
	1, MPRP-1, Overlapping with the m-AAA protease 1 homolog, OMA1, MPRP1		
	Background: Metalloprotease that is part of the quality control system in the inner membrane of		
	mitochondria. Following stress conditions that induce loss of mitochondrial membrane		
	potential, mediates cleavage of OPA1 at S1 position, leading to OPA1 inactivation and negative		
	regulation of mitochondrial fusion. May also cleave UQCC3 under these conditions. Its role in		
	mitochondrial quality control is essential for regulating lipid metabolism as well as to maintain		
	body temperature and energy expenditure under cold-stress conditions.
