### Target Details

Bac	ckground: STUB1 (STIP1 homology and U-Box containing protein 1), also known as CHIP (C
teri	minus of HSC70-Interacting Protein), is a human gene. This gene encodes a protein
cor	ntaining tetratricopeptide repeat and a U-box that functions as a ubiquitin
liga	ase/cochaperone. The encoded protein binds to and ubiquitinates shock cognate 71 kDa
pro	otein (Hspa8) and DNA polymerase beta (Polb), among other targets. Mutations in this gene
cau	use spinocerebellar ataxia, autosomal recessive 16. Alternative splicing results in multiple
trai	nscript variants. There is a pseudogene for this gene on chromosome 2.

#### **Western Blotting**

Image 1. Western blot analysis of STUB1 using anti-STUB1 antibody. Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each Lane was loaded with 50ug of sample under reducing conditions. Lane 1: rat heart tissue lysates, Lane 2: rat brain tissue lysates, Lane 3: mouse brain tissue lysates, Lane 4: human MCF-7 whole cell lysates. After Electrophoresis, proteins were transferred to a Nitrocellulose membrane at 150mA for 50-90 minutes. Blocked the membrane with 5% Non-fat Milk/ TBS for 1.5 hour at RT. The membrane was incubated with rabbit anti-STUB1 antigen affinity purified polyclonal antibody (Catalog #) at 0.5 µg/mL overnight at 4°C, then washed with TBS-0.1%Tween 3 times with 5 minutes each and probed with a goat anti-rabbit IgG-HRP secondary antibody at a dilution of 1:10000 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit (Catalog # EK1002) with Tanon 5200 system. A specific band was detected for STUB1 at approximately 35KD. The expected band size for STUB1 is at 35KD.

#### Immunohistochemistry

**Image 2.** IHC analysis of STUB1 using anti-STUB1 antibody. STUB1 was detected in paraffin-embedded section of human colon cancer tissue. Heat mediated antigen retrieval was performed in citrate buffer (pH6, epitope retrieval solution) for 20 mins. The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 1µg/ml rabbit anti-STUB1 Antibody overnight at 4°C. Biotinylated goat anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using Strepavidin-Biotin-Complex (SABC)(Catalog # SA1022) with DAB as the chromogen.
