Target Details

	excitatory neurotransmitter L-glutamate induces a conformation change, leading to the opening
	of the cation channel, and thereby converts the chical signal to an electrical impulse. The
	receptor then desensitizes rapidly and enters a transient inactive state, characterized by the
	presence of bound agonist. In the presence of CACNG4 or CACNG7 or CACNG8, shows
	resensitization which is characterized by a delayed accumulation of current flux upon continued
	application of glutamate.
Molecular Weight:	13.98 kDa
