Target Details	
Background:	Acts as a CD40 functional homolog to prevent apoptosis of infected B-lymphocytes and drive
	their proliferation. Functions as a constitutively active tumor necrosis factor receptor that
	induces the activation of several signaling pathways, including those of the NF-kappa-B family.
	LMP1 signaling leads to up-regulation of antiapoptotic proteins and provide growth signals in
	latently infected cells. It is a short-lived protein probably degraded by the proteasome .
Molecular Weight:	22.97 kDa
UniProt:	P13198

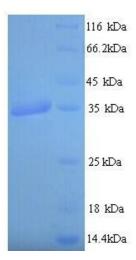

### **Application Details**
