Target:	CCAR1	
Alternative Name:	CCAR1 (CCAR1 Products)	
Background:	Associates with components of the Mediator and p160 coactivator complexes that play a role as intermediaries transducing regulatory signals from upstream transcriptional activator proteins to basal transcription machinery at the core promoter. Recruited to endogenous	
	nuclear receptor target genes in response to the appropriate hormone. Also functions as a p53	
	coactivator. May thus play an important role in transcriptional regulation (By similarity. May be	
	involved in apoptosis signaling in the presence of the reinoid CD437. Apoptosis induction	
	involves sequestration of 14-3-3 protein(s and mediated altered expression of multiple cell	
	cycle regulatory genes including MYC, CCNB1 and CDKN1A. Plays a role in cell cycle	
	progression and/or cell proliferation. In association with CALCOCO1 enhances GATA1- and	
	MED1-mediated transcriptional activation from the gamma-globin promoter during erythroid	
	differentiation of K562 erythroleukemia cells. Can act as a both a coactivator and corepressor	
	of AR-mediated transcription. Contributes to chromatin looping and AR transcription complex	
	assembly by stabilizing AR-GATA2 association on chromatin and facilitating MED1 and RNA	
	polymerase II recruitment to AR-binding sites. May play an important role in the growth and	
	tumorigenesis of prostate cancer cells.,CCAR1,Epigenetics & Nuclear Signaling,RNA
