Target Details

Alternative Name:	SNX3 (SNX3 Products)
Background:	This gene encodes a member of the sorting nexin family. Members of this family contain a phox (PX) domain, which is a phosphoinositide binding domain, and are involved in intracellular trafficking. This protein does not contain a coiled coil region, like most family members. This protein interacts with phosphatidylinositol-3-phosphate, and is involved in protein trafficking. A pseudogene of this gene is present on the sex chromosomes. Alternative splicing results in multiple transcript variants encoding distinct isoforms.,SNX3,Grd19,MCOPS8,SDP3,Signal Transduction,SNX3
Molecular Weight:	13 kDa/14 kDa/16 kDa/18 kDa
