#### Product Details

Purpose:	Mouse Monoclonal anti-CD44 Standard (HCAM/918), Biotin Conjugate
Immunogen:	Recombinant human HCAM protein
Clone:	HCAM-918
Isotype:	IgG2a kappa
Characteristics:	This antibody recognizes a cell surface glycoprotein of 80-95 kDa (CD44) on lymphocytes,
	monocytes, and granulocytes (Leucocyte Typing Workshop V). Its epitope is resistant to
	digestion by trypsin and chymotrypsin. The CD44 family of glycoproteins exists in a number of
	variant isoforms, the most common being the standard 85-95 kDa or hematopoietic variant
	(CD44s). Higher molecular weight isoforms are described in epithelial cells (CD44v), which are
	believed to function in intercellular adhesion and stromal binding. CD44 immunostaining is
	commonly used for the discrimination of urothelial transitional cell carcinoma in-situ from non-

CF® dyes offer exceptional brightness and photostability. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.
