## **Product Details**

Ola anna atamiati a an	This MAN was a waite a basis (Towns II and IMMA) as talk out the surface of the C7 LDs (OV1) CALDs	
Isotype:	IgG1 kappa	
Clone:	KRTH-1076	
Immunogen:	Recombinant human KRT76 protein	
Purpose:	Mouse Monoclonal anti-Cytokeratin, HMW (KRTH/1076), CF594 Conjugate	

Characteristics:

This MAb recognizes basic (Type II or HMW) cytokeratins, which include 67 kDa (CK1), 64 kDa (CK3), 59 kDa (CK4), 58 kDa (CK5), 56 kDa (CK6), 52 kDa (CK8). Twenty human keratins are resolved with two-dimensional gel electrophoresis into acidic (pl 6.0) subfamilies. The acidic keratins have molecular weights (MW) of 56.5, 55, 51, 50, 50, 48, 46, 45, and 40 kDa. Many studies have shown the usefulness of keratins as markers in cancer research and tumor diagnosis. Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low

abundance targets, because blue dyes have lower fluorescence and can give higher nonspecific background than other dye colors.
