Product Details

Purpose:	Mouse Monoclonal anti-CD11c (HC1/1), Biotin Conjugate
Immunogen:	Human monocytic U937 phorbol ester-treated cells
Clone:	HC1-1
Isotype:	IgG1 kappa
Characteristics:	CD11c, also known as Integrin, alpha X (complement component 3 receptor 4 subunit) (ITGAX), is a type I transmembrane protein found at high levels on most human dendritic cells, but also on monocytes, macrophages, neutrophils, and some B cells that induces cellular activation and helps trigger neutrophil respiratory burst, expressed in hairy cell leukemias, acute non-lymphocytic leukemias, and some B-cell chronic lymphocytic leukemias. Primary antibodies are available purified, or with a selection of fluorescent CF® dyes and other labels. CF® dyes offer exceptional brightness and photostability. Note: Conjugates of blue fluorescent dyes like CF®405S and CF®405M are not recommended for detecting low abundance targets, because

blue dyes have lower fluorescence and can give higher non-specific background than other dye colors.
