

Datasheet for ABIN622080 **TMPRSS15 Protein**

[Go to Product page](#)

Overview

Quantity: 1000 IU

Target: TMPRSS15

Origin: Pig

Source: Pig

Protein Type: Native

Product Details

Characteristics: Native Porcine Enteropeptidase/Enterokinase

Target Details

Target: TMPRSS15

Alternative Name: Enteropeptidase/Enterokinase ([TMPRSS15 Products](#))

Background: Porcine enteropeptidase is a specific protease which cleaves after the lysine at its recognition site: Asp-Asp-Asp-Asp-Lys. Enterokinase will not cleave a site followed by proline. Theoretical Mw is 21,880 Dalton, the apparent Mw on SDS-PAGE is about 40 kDa. If a fusion tag is located in the N-terminus with an enterokinase site, enterokinase will be able to remove the fusion tag and to generate the protein exactly as you need without adding any unwanted residues. RayBiotechs enterokinase is a highly purified enterokinase from porcine. The enzyme has been extensively purified and tested to ensure that there are no other contaminating proteases.

Introduction: Enteropeptidase or enterokinase is an enzyme involved in human digestion. It is produced by cells in the duodenum wall, and is secreted from duodenum's glands, the crypts of Lieberk \ddot{u} hn, whenever ingested food enters the duodenum from the stomach.

Target Details

Enteropeptidase has the critical job of turning trypsinogen (a zymogen) to trypsin, indirectly activating a number of pancreatic digestive enzymes. Enteropeptidase is a serine protease enzyme(EC3.4.21.9). Enteropeptidase is a part of the Chymotrypsin-clan of serine proteases, and is structurally similar to these proteins. Synonyms: Enteropeptidase, EC 3.4.21.9, Enterokinase, Serine protease 7, ENTK, MGC133046.

Application Details

Restrictions: For Research Use only

Handling

Format: Liquid

Buffer: 2 IU/μl, 50mM Tris-HCl, pH 8.0, 0.5M NaCl and 50% glycerol.

Storage: -20 °C
