Quantity:	2500 IU
Target:	ASRGL1
Host:	Please inquire

Product Details

Characteristics:	L-Asparaginase
Purity:	> 96.0 % as determined by: (a) Analysis by RP-HPLC. (b) Analysis by SDS-PAGE.

Target: ASRGL1 Alternative Name: L-Asparaginase (ASRGL1 Products) Background: L-Asparaginase produced from E.Coli containing 303 amino acids and having a molecular mass of 31731 Dalton. Introduction: L-Asparaginase is an enzyme that depletes L-Asparagine ,an important nutrient for cancer cells, resulting in cancer/tumor cell starvation. L-asparaginase is an anti-tumor agent derived from E.coli.,which can inhibit the growth of malignant cells. It is used mainly for the induction of remission in acute lymphoblastic leukaemia. Because of the lymph node origin of malignant B cells in Multiple Myeloma, L-Asparagine is an essential amino acid for their cell metabolism, and, consequently, L-Asparaginase may be of value in managing the disease. The rationale behind asparaginase is that it takes advantage of the fact that ALL cellsare unable to synthesize the non-essential amino acidasparaginewhereas normal cells are able to make their own asparagine. These leukemic cells depend on circulating asparagine. Asparaginase however catalyzes the conversion of L-asparagine to aspartic acidand ammonia.	Target Details
