	processes. Implicated in tissue-specific regulation of gene transcription and alternative splicing
	of several pre-mRNAs. Binds to and stimulates transcription from the tumor suppressor TXNIP
	gene promoter, may thus be involved in tumor suppression. When associated with SAFB, binds
	to and stimulates transcription from the SREBF1 promoter. Associates with nascent mRNAs
	transcribed by RNA polymerase II. Component of the supraspliceosome complex that regulates
	pre-mRNA alternative splice site selection. Can either activate or suppress exon inclusion, acts
	additively with TRA2B to promote exon 7 inclusion of the survival motor neuron SMN2.
	Represses the splicing of MAPT/Tau exon 10. Binds preferentially to single- stranded 5'-
	CC[A/C]-rich RNA sequence motifs localized in a single-stranded conformation, probably binds
	RNA as a homodimer. Binds non-specifically to pre-mRNAs. Plays also a role in the cytoplasmic
	TNFR1 trafficking pathways, promotes both the IL-1- beta-mediated inducible proteolytic
	cleavage of TNFR1 ectodomains and the release of TNFR1 exosome-like vesicles to the
	extracellular compartment.
