Datasheet for ABIN6244356  
**G-CSF IQ-ELISA Kit**

### Overview

Quantity:	96 tests
Target:	G-CSF (CSF3)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.0512 pg/mL - 800 pg/mL
Minimum Detection Limit:	0.0512 pg/mL
Application:	ELISA

### Product Details

Purpose:	Human Immunoquantitative (PCR-Based) GCSF ELISA Kit for cell culture supernatants, plasma, and serum samples.
Sample Type:	Cell Culture Supernatant, Plasma, Serum
Analytical Method:	Semi-Quantitative
Detection Method:	qPCR
Characteristics:	IQELISAs employ specific capture antibodies coated on a 96-well PCR plate. Standards and samples are pipetted into the wells; the target protein in the standards and samples binds to the immobilized antibody. The wells are washed and the detection affinity reagent is added to the wells where it binds to any captured antigen. The wells are washed, and primers and PCR master mix are added to each well. The plate is placed into a real time PCR instrument for cycling and measurement of DNA amplification. The cycle number where amplification is detected is proportional to the amount of affinity detection reagent that bound to captured

## Product Details

---

antigen in each well.

Components:	<ul style="list-style-type: none"><li>• GCSF Microplate (Item A): 96 well PCR plate coated with anti-Human GCSF</li><li>• Wash Buffer I Concentrate (20x) (Item B): 25 ml of 20x concentrated solution</li><li>• Standards (Item C): 2 vials of recombinant Human GCSF</li><li>• Assay Diluent A (Item D): 30 ml diluent buffer, 0.09% sodium azide as preservative. For Standard/Sample (serum/plasma) diluent</li><li>• Assay Diluent B (Item E): 15 ml of 5x concentrated buffer. For Standard/Sample (cell culture medium/urine) diluent</li><li>• Detection Affinity Reagent for GCSF (Item F): 2 vials of a 4x concentrated solution of anti-Human GCSF affinity reagent</li><li>• IQELISA Detection Reagent (Item G): 1.4ml of a 10x concentrated stock</li><li>• Primer Solution (Item I): 1.7 ml vial</li><li>• PCR Master Mix (Item J): 1.2 ml vial</li><li>• PCR Preparation buffer (Item K): 1 ml vial of 10x concentrated buffer</li><li>• Final Wash Buffer (Item L): 10ml vial of 10x concentrated buffer</li></ul>
-------------	--

Material not included:	<ul style="list-style-type: none"><li>• Real-time PCR instrument, Bio-Rad recommended</li><li>• Precision pipettes to deliver 2 <math>\mu</math>L to 1 mL volumes</li><li>• Adjustable 1-25 mL pipettes for reagent preparation</li><li>• 100 mL and 1 liter graduated cylinders</li><li>• Absorbent paper</li><li>• Distilled or deionized water</li><li>• Log-log graph paper or computer and software for data analysis</li><li>• Tubes to prepare standard or sample dilutions</li><li>• Heating block or water bath capable of 80°C</li></ul>
------------------------	--

## Target Details

---

Target:	G-CSF (CSF3)
Alternative Name:	GCSF ( <a href="#">CSF3 Products</a> )
Gene ID:	1440
UniProt:	<a href="#">P09919</a>
Pathways:	<a href="#">Cellular Response to Molecule of Bacterial Origin, Regulation of Actin Filament Polymerization</a>

## Application Details

---

Application Notes:	The Immuno-Quantitative ELISA (IQELISA) kits are an innovative assay platform that combines the specificity and ease of use of an ELISA with the sensitivity of real-time PCR. This results in an assay that is simultaneously familiar and cutting edge and enables the use of only 1/10th
--------------------	---

## Application Details

---

the sample volume while also providing 10x more sensitivity than a traditional ELISA.

Comment:

Features:

- Excellent for follow up/confirmation of antibody array data
- Pre-coated 96 well plate
- Strip plate format minimizes waste
- Complete kit includes all necessary reagents
- 10x more sensitive than ELISA
- Reproducible and reliable
- Optimized for serum, plasma, urine and cell culture medium
- 1/10th the sample volume of an ELISA

Research Applications:

- Detection of quantitative protein levels in biological fluids
- Validation of antibody array results
- Validation of biomarker discovery studies

Plate:

Pre-coated

Protocol:

1. Prepare all reagents, samples and standards as instructed
2. Add 25  $\mu$ L standard or sample to each well. Incubate for 2.5 hours at room temperature or overnight at 4°C
3. Add 25  $\mu$ L detection affinity reagent to each well. Incubate 1 hour at room temperature
4. Add 25  $\mu$ L of IQELISA Detection Reagent to each well. Incubate 1 hour
5. Add 15  $\mu$ L Primer solution 10  $\mu$ L of PCR master mix to each well
6. Run real-time PCR

Reagent Preparation:

Recommended Dilution for serum and plasma samples 2-10 fold

Restrictions:

For Research Use only

## Handling

---

Storage:

-20 °C

Storage Comment:

May be stored for up to 6 months at 2° to 8°C from the date of shipment. Standard (recombinant protein) should be stored at -20°C or -80°C (recommended at -80°C) after reconstitution. Opened PCR plate or reagents may be stored for up to 1 month at 2° to 8°C. Note: the kit can be used within one year if the whole kit is stored at -20°C. Avoid repeated freeze-thaw cycles.

Expiry Date:

6 months
