Publications

#### Overview

Quantity:	96 tests
Target:	IL-10 (IL10)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	1-150 pg/mL
Minimum Detection Limit:	1 pg/mL
Application:	ELISA

#### Product Details

Purpose:	Human IL-10 ELISA Kit for cell culture supernatants, plasma, and serum samples.
Sample Type:	Plasma, Cell Culture Supernatant, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This ELISA kit shows no cross-reactivity with any of the cytokines tested: human BDNF, BLC, ENA-78, FGF-4, IL-1 alpha, IL-2, IL-3, IL-4, IL-5, IL-6, IL-7, IL-8, IL-9, IL-11, IL-12 p70, IL-12 p40, IL- 15, I-309, IP-10, G-CSF, GM-CSF, IFN-gamma, Leptin (OB), MCP-1, MCP-2, MCP-3, MDC, MIP-1 alpha, MIP-1 beta, MIP-1 delta, PARC, PDGF, RANTES, SCF, TARC, TGF-beta, TIMP-1, TIMP-2, TNF-alpha, TNF-beta, TPO, VEGF.
Sensitivity:	< 1 pg/mL
Characteristics:	Strip plates and additional reagents allow for use in multiple experiments

#### Target Details

Target:	IL-10 (IL10)
Alternative Name:	IL-10 (IL10 Products)
Background:	Human IL-10 is produced by activated CD8 (+) peripheral blood T-cells, by T-helper CD4 (+) T- cell clones after both antigen-specific and polyclonal activation, by B-cell lymphomas, and by monocytes following cell activation by bacterial lipopolysaccharides and mast cells. IL-10 is a homodimeric protein with subunits having a length of 160 amino acids. Human IL-10 shows 73 percent amino acid homology with murine IL-10. IL-10 inhibits the synthesis of a number of cytokines such as IL-2 and TNF-beta in Th1 T-helper subpopulations of T-cells but not of Th2 T- helper cells. IL-10 also inhibits mitogen- or anti-CD3 induced proliferation of T-cells in the presence of accessory cells and reduces the production of IFN-gamma and IL-2. The Human IL- 10 ELISA (Enzyme-Linked Immunosorbent Assay) kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of human IL-10 in serum, plasma, cell culture supernatants and urine. This assay employs an antibody specific for human IL-10 coated on a 96-well plate. Standards and samples are pipetted into the wells and IL-10 present in a sample is bound to the wells by the immobilized antibody. The wells are washed and

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/6 | Product datasheet for ABIN625007 | 07/26/2024 | Copyright antibodies-online. All rights reserved.

	biotinylated anti-human IL-10 antibody is added. After washing away unbound biotinylated
	antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a
	TMB substrate solution is added to the wells and color develops in proportion to the amount of
	IL-10 bound. The Stop Solution changes the color from blue to yellow, and the intensity of the
	color is measured at 450 nm. Reproducibility: Intra-Assay: CV<10% Inter-Assay: CV<12%.
Gene ID:	3586
UniProt:	P22301
Pathways:	Cellular Response to Molecule of Bacterial Origin, Regulation of Leukocyte Mediated Immunity,
	Production of Molecular Mediator of Immune Response, Maintenance of Protein Location,
	Cancer Immune Checkpoints

#### Application Details

Application Notes:	Recommended Dilution for serum and plasma samples2 fold
Sample Volume:	100 µL
Plate:	Pre-coated
Protocol:	1. Prepare all reagents, samples and standards as instructed in the manual.
	2. Add 100 $\mu$ L of standard or sample to each well.
	3. Incubate 2.5 h at RT or O/N at 4 °C.
	4. Add 100 $\mu$ L of prepared biotin antibody to each well.
	5. Incubate 1 h at RT.
	6. Add 100 $\mu$ L of prepared Streptavidin solution to each well.
	7. Incubate 45 min at RT.
	8. Add 100 μL of TMB One-Step Substrate Reagent to each well.
	9. Incubate 30 min at RT.
	10. Add 50 $\mu$ L of Stop Solution to each well.
	11. Read at 450 nm immediately.
Reagent Preparation:	1. Bring all reagents and samples to room temperature (18-25 °C) before use.
	2. Sample dilution: If your samples need to be diluted, Assay Diluent A (Item D) should be used
	for dilution of serum/plasma samples. 1x Assay Diluent B (Item E) should be used for dilution of
	culture supernatants and urine. Suggested dilution for normal serum/plasma: 2 fold*. *Please
	note that levels of the target protein may vary between different specimens. Optimal dilution
	factors for each sample must be determined by the investigator.
	3. Assay Diluent B should be diluted 5-fold with deionized or distilled water.
	4. Preparation of standard: Briefly spin the vial of Item C and then add 400 $\mu L$ Assay Diluent A

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 3/6 | Product datasheet for ABIN625007 | 07/26/2024 | Copyright antibodies-online. All rights reserved. (for serum/plasma samples) or 1x Assay Diluent B (for cell culture medium and urine) into Item C vial to prepare a 22 ng/mL standard. Dissolve the powder thoroughly by a gentle mix. Add 5  $\mu$ L IL-10 standard from the vial of Item C, into a tube with 728.3  $\mu$ L Assay Diluent A or 1x Assay Diluent B to prepare a 150 pg/mL stock standard solution. Pipette 300  $\mu$ L Assay Diluent A or 1x Assay Diluent B into each tube. Use the stock standard solution to produce a dilution series . Mix each tube thoroughly before the next transfer. Assay Diluent A or 1x Assay Diluent B serves as the zero standard (0 pg/mL). 5  $\mu$ L standard + 728.3  $\mu$ L 300  $\mu$ L 9g/mL pg/mL pg/mL pg/mL pg/mL pg/mL pg/mL pg/mL pg/mL

5. If the Wash Concentrate (20x) (Item B) contains visible crystals, warm to room temperature and mix gently until dissolved. Dilute 20 ml of Wash Buffer Concentrate into deionized or distilled water to yield 400 ml of 1x Wash Buffer.

6. Briefly spin the Detection Antibody vial (Item F) before use. Add 100 μL of 1x Assay Diluent B into the vial to prepare a detection antibody concentrate. Pipette up and down to mix gently (the concentrate can be stored at 4 °C for 5 days). The detection antibody concentrate should be diluted 80-fold with 1x Assay Diluent B and used in step 4 of Part VI Assay Procedure.
7. Briefly spin the HRP-Streptavidin concentrate vial (Item G) and pipette up and down to mix gently before use. HRP-Streptavidin concentrate should be diluted 200-fold with 1x Assay Diluent B. For example: Briefly spin the vial (Item G) and pipette up and down to mix gently . Add 50 μL of HRP-Streptavidin concentrate into a tube with 10 ml 1x Assay Diluent B to prepare a final 200 fold diluted HRP-Streptavidin solution (don't store the diluted solution for next day use). Mix well.

Assay Procedure:1. Bring all reagents and samples to room temperature (18 - 25 °C) before use. It is<br/>recommended that all standards and samples be run at least in duplicate.2. Add 100 µL of each standard (see Reagent Preparation step 2) and sample into appropriate<br/>wells. Cover well and incubate for 2.5 hours at room temperature or over night at 4 °C with<br/>gentle shaking.3. Discard the solution and wash 4 times with 1x Wash Solution. Wash by filling each well with<br/>Wash Buffer (300 myl) using a multi-channel Pipette or autowasher. Complete removal of liquid<br/>at each step is essential to good performance. After the last wash, remove any remaining Wash<br/>Buffer by aspirating or decanting. Invert the plate and blot it against clean paper towels.4. Add 100 µL of 1x prepared biotinylated antibody (Reagent Preparation step 6) to each well.<br/>Incubate for 1 hour at room temperature with gentle shaking.5. Discard the solution. Repeat the wash as in step<br/>6. Add 100 µL of prepared Streptavidin solution (see Reagent Preparation step 7) to each well.

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 4/6 | Product datasheet for ABIN625007 | 07/26/2024 | Copyright antibodies-online. All rights reserved.

	Incubate for 45 minutes at room temperature with gentle shaking.
	7. Discard the solution. Repeat the wash as in step
	8. Add 100 $\mu$ L of TMB One-Step Substrate Reagent (Item H) to each well. Incubate for 30
	minutes at room temperature in the dark with gentle shaking.
	9. Add 50 $\mu L$ of Stop Solution (Item I) to each well. Read at 450 nm immediately.
Calculation of Results:	Calculate the mean absorbance for each set of duplicate standards, controls and samples, and
	subtract the average zero standard optical density. Plot the standard curve on log-log graph
	paper or using Sigma plot software, with standard concentration on the x-axis and absorbance
	on the y-axis. Draw the best-fit straight line through the standard points.
	Typical Data: These standard curves are for demonstration only. A standard curve must be run
	with each assay. Assay Diluent A IL-10 concentration (pg/mL) O D =4 50 n m 0.1 1 10 0 1 10
	100 Assay Diluent B IL-10 concentration (pg/mL) O D =4 50 n m 0.1 1 10 0 1 10 100
	Sensitivity: The minimum detectable dose of IL-10 is typically less than 1 pg/mL.
	Recovery: Recovery was determined by spiking various levels of recombinant human IL-10 into
	human serum, plasma and cell culture media. Mean recoveries are as follows: Sample Type
	Average % Recovery Range ( %) Serum 101.94 87-108 Plasma 102.39 93-109 Cell culture media
	98.37 87-110
	Linearity: a :2 Average % of Expected 97 95 98 1 2 . REPRODUCIBILITY tra-Assay: CV<10 %
Assay Precision:	Intra-Assay: CV< 10 % Inter-Assay: CV< 12 %
Restrictions:	For Research Use only
Handling	
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-20 °C
Storage Comment:	The entire kit may be stored at -20°C for up to 1 year from the date of shipment. Avoid repeated
	freeze-thaw cycles. The kit may be stored at 4°C for up to 6 months. For extended storage, it is
	recommended to store at -80°C.
Expiry Date:	6 months
