## Datasheet for ABIN625079 Total Prostate Specific Antigen (tPSA) ELISA Kit

2 Publications

#### Overview

Quantity:	96 tests
Target:	Total Prostate Specific Antigen (tPSA)
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	8-2000 pg/mL
Minimum Detection Limit:	8 pg/mL
Application:	ELISA

### Product Details

Purpose:	Human PSA-total ELISA Kit for cell culture supernatants, plasma, and serum samples.
Sample Type:	Plasma, Cell Culture Supernatant, Serum
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This ELISA kit shows no cross-reactivity with the following cytokines tested: human Angiogenin
	BDNF, BLC, CNTF, ENA- 78, FGF-4, IL-1 alpha, IL-1 beta, IL-2, IL-3, IL-4, IL-5, IL-6, IL-7, IL-8, IL-9,
	IL-11, IL-12 p70, IL-12 p40, IL-13, IL-15, I-309, IP-10, FGF-4, FGF-6, FGF- 7, G-CSF, GDNF, GM-
	CSF, IFN-gamma, IGFBP-2, IGFBP-3, IGFBP-4, Leptin (OB), MCP-1, MCP-2, MCP-3, MDC, MIF,
	MIG, MIP-1 alpha, MIP-1 beta, MIP-1 delta, PARC, PDGF, RANTES, SCF, SDF-1 alpha, TARC, TGF
	beta, TIMP-1, TIMP-2, TNF-alpha, TNF-beta, TPO, VEGF.
Sensitivity:	< 8 pg/mL

#### Product Details

Characteristics:	<ul> <li>Strip plates and additional reagents allow for use in multiple experiments</li> <li>Quantitative protein detection</li> <li>Establishes normal range</li> <li>The best products for confirmation of antibody array data</li> </ul>
Components:	Pre-Coated 96-well Strip Microplate
	Wash Buffer
	Stop Solution
	Assay Diluent(s)
	Lyophilized Standard
	Biotinylated Detection Antibody
	Streptavidin-Conjugated HRP
	TMB One-Step Substrate
Material not included:	Distilled or deionized water
	- Precision pipettes to deliver 2 $\mu$ L to 1 $\mu$ L volumes
	<ul> <li>Adjustable 1-25 µL pipettes for reagent preparation</li> </ul>
	<ul> <li>100 μL and 1 liter graduated cylinders</li> </ul>
	Tubes to prepare standard and sample dilutions
	Absorbent paper
	Microplate reader capable of measuring absorbance at 450nm
	Log-log graph paper or computer and software for ELISA data analysis

Target Details	
Target:	Total Prostate Specific Antigen (tPSA)
Abstract:	tPSA Products
Background:	The Human PSA-total (Prostate Specific Antigen, total) ELISA (Enzyme-Linked Immunosorbent Assay) kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of human PSA-total in serum, plasma, cell culture supernatants and urine. This assay employs an antibody specific for human PSA-total coated on a 96-well plate. Standards and samples are pipetted into the wells and PSA-total present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-human PSA-total antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of PSA-total bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm. Reproducibility: Intra-Assay: CV<10% Inter-Assay: CV<12%.
Gene ID:	354

P07288

## Application Details

Application Notes:	Recommended Dilution for serum and plasma samples2 fold
Sample Volume:	100 µL
Plate:	Pre-coated
Protocol:	1. Prepare all reagents, samples and standards as instructed in the manual.
	2. Add 100 $\mu$ L of standard or sample to each well.
	3. Incubate 2.5 h at RT or O/N at 4 °C.
	4. Add 100 $\mu$ L of prepared biotin antibody to each well.
	5. Incubate 1 h at RT.
	6. Add 100 $\mu$ L of prepared Streptavidin solution to each well.
	7. Incubate 45 min at RT.
	8. Add 100 $\mu$ L of TMB One-Step Substrate Reagent to each well.
	9. Incubate 30 min at RT. 10. Add 50 μL of Stop Solution to each well.
	11. Read at 450 nm immediately.
Reagent Preparation:	1. Bring all reagents and samples to room temperature (18 - 25 °C) before use.
	2. Sample dilution: Assay Diluent A (Item D) should be used for dilution of serum/plasma
	samples, 1x Assay Diluent B (Item E) should be used for dilution of cell culture
	supernates/urine. Suggested dilution for normal serum/plasma: 2 fold*. * Please note that
	levels of the target protein may vary between different specimens. Optimal dilution factors for
	each sample must be determined by the investigator.
	3. Assay Diluent B should be diluted 5-fold with deionized or distilled water before use.
	4. Preparation of standard: Briefly spin the vial of Item C and then add 400 $\mu L$ Assay Diluent A
	(for serum/plasma samples) or 1x Assay Diluent B (for cell culture supernates/urine) into Item
	C vial to prepare a 50 ng/mL standard. Dissolve the powder thoroughly by a gentle mix. Add 50
	μL PSA-total standard (50 ng/mL) from the vial of Item C, into a tube with 950 μL Assay Diluen
	A or 1x Assay Diluent B to prepare a 2,500 pg/mL standard solution. Pipette 300 µL Assay
	Diluent A or 1x Assay Diluent B into each tube. Use the 2,500 pg/mL standard solution to
	produce a dilution series . Mix each tube thoroughly before the next transfer. Assay Diluent A c
	1x Assay Diluent B serves as the zero standard (0 pg/mL). 50 µL standard + 950 µL 200 µL 20
	μL 200 μL 200 μL 200 μL 200myl 2,500 1,000 400 160 64 25.6 10.24 0 pg/mL pg/mL pg/mL
	pg/mL pg/mL pg/mL pg/mL
	5. If the Wash Concentrate (20x) (Item B) contains visible crystals, warm to room temperature

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 3/6 | Product datasheet for ABIN625079 | 09/12/2023 | Copyright antibodies-online. All rights reserved.

	and mix gently until dissolved. Dilute 20 ml of Wash Buffer Concentrate into deionized or
	distilled water to yield 400 ml of 1x Wash Buffer.
	6. Briefly spin the Detection Antibody vial (Item F) before use. Add 100 $\mu$ L of 1x Assay Diluent B
	into the vial to prepare a detection antibody concentrate. Pipette up and down to mix gently (the
	concentrate can be stored at 4 °C for 5 days). The detection antibody concentrate should be
	diluted 80-fold with 1x Assay Diluent B and used in step 4 of Part VI Assay Procedure.
	7. Briefly spin the HRP-Streptavidin concentrate vial (Item G) and pipette up and down to mix
	gently before use. HRP-Streptavidin concentrate should be diluted 500-fold with 1x Assay
	Diluent B. For example: Briefly spin the vial (Item G) and pipette up and down to mix gently . Add
	20 µL of HRP-Streptavidin concentrate into a tube with 10 MI 1x Assay Diluent B to prepare a
	500-fold diluted HRP- Streptavidin solution (don't store the diluted solution for next day use).
	Mix well.
Accourding the sector of the s	
Assay Procedure:	1. Bring all reagents and samples to room temperature (18 - 25 °C) before use. It is
	recommended that all standards and samples be run at least in duplicate.
	2. Add 100 $\mu$ L of each standard (see Reagent Preparation step 2) and sample into appropriate
	wells. Cover well and incubate for 2.5 hours at room temperature or over night at 4 °C with
	gentle shaking.
	3. Discard the solution and wash 4 times with 1x Wash Solution. Wash by filling each well with
	Wash Buffer (300 myl) using a multi-channel Pipette or autowasher. Complete removal of liquid
	at each step is essential to good performance. After the last wash, remove any remaining Wash
	Buffer by aspirating or decanting. Invert the plate and blot it against clean paper towels.
	4. Add 100 $\mu$ L of 1x prepared biotinylated antibody (Reagent Preparation step 6) to each well.
	Incubate for 1 hour at room temperature with gentle shaking.
	5. Discard the solution. Repeat the wash as in step
	6. Add 100 $\mu$ L of prepared Streptavidin solution (see Reagent Preparation step 7) to each well.
	Incubate for 45 minutes at room temperature with gentle shaking.
	7. Discard the solution. Repeat the wash as in step
	8. Add 100 $\mu L$ of TMB One-Step Substrate Reagent (Item H) to each well. Incubate for 30
	minutes at room temperature in the dark with gentle shaking.
	9. Add 50 $\mu L$ of Stop Solution (Item I) to each well. Read at 450 nm immediately.
Calculation of Results:	Calculate the mean absorbance for each set of duplicate standards, controls and samples, and
	subtract the average zero standard optical density. Plot the standard curve on log-log graph
	paper or using Sigma plot software, with standard concentration on the x-axis and absorbance
	on the y-axis. Draw the best-fit straight line through the standard points.
	Typical Data: These standard curves are for demonstration only. A standard curve must be run

with each assay. Assay Diluent A Human PSA-total concentration (pg/mL) 1 10 100 1000
10000 0 D =4 50 n m 0.01 0.1 1 10 Assay Diluent B Human PSA-total concentration (pg/mL) 1
10 100 10000 O D =4 50 n m 0.01 0.1 1 10
Sensitivity: The minimum detectable dose of PSA-total is typically less than 8 pg/mL.
Recovery: Recovery was determined by spiking various levels human PSA-total into human
serum, plasma and cell culture media. Mean recoveries are as follows: Sample Type Average $\%$
Recovery Range ( %) Serum 105.4 94-112 Plasma 80.63 72-94 Cell culture media 95.25 81-108
Linearity: Sample Type Serum Plasma Cell Culture Media 1:2 Average % of Expected 112.5
107.3 84.77 Range ( %) 103-120 100-115 76-92 1:4 Average % of Expected 87.91 97.14 72.89
Range (%) 77-95 79-107 67-78
Reproducibility: Intra-Assay: CV<10 % Inter-Assay: CV<12 %
Intra-Assay: CV< 10 % Inter-Assay: CV< 12 %
