antibodies

Datasheet for ABIN6253681 CD96 Protein (CD96) (AA 22-503) (His tag)

Overview

2

Images

Quantity:	100 µg
Target:	CD96
Protein Characteristics:	AA 22-503
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Biological Activity:	Active
Purification tag / Conjugate:	This CD96 protein is labelled with His tag.

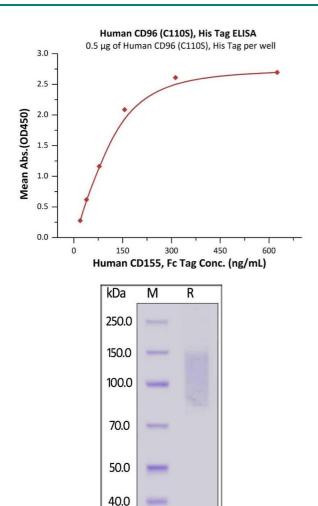

Product Details

Sequence:	AA 22-503
Characteristics:	This protein carries a polyhistidine tag at the C-terminus. The protein has a calculated MW of
	55.4 kDa. The protein migrates as 90-130 KDa under reducing (R) condition (SDS-PAGE) due to
	glycosylation.
Purity:	>90 % as determined by SDS-PAGE.
Endotoxin Level:	Less than 1.0 EU per μ g by the LAL method.
Target Details	
Target:	CD96
Alternative Name:	CD96 (CD96 Products)

Target Details	
Background:	The progression of pancreatic cancer (PC) is significantly associated with tumor immune
	escape, which may be associated with nature killer (NK) cell dysfunction. CD226, CD96, and
	TIGIT, which share the ligand CD155, play important roles in the regulation of NK cell function.
	The present study was conducted to investigate the roles of these molecules in NK cells from
	PC patients. TIGIT and CD96 together with the co-stimulatory receptor CD226 form a pathway
	that is analogous to the CD28/CTLA-4 pathway, in which shared ligands and differential
	receptor:ligand affinities fine-tune the immune response. Although the roles of TIGIT and CD96
	as immune checkpoint receptors in T cell and natural killer cell biology are just beginning to be
	uncovered, accumulating data support the targeting of these receptors for improving anti-
	tumor immune responses. A clear understanding of the immune cell populations regulated by
	TIGIT and CD96 is key to the design of immunotherapies that target these receptors in
	combination with other existing immune checkpoint blockade therapies. The dysfunction of
	CD96 may trigger C syndrome: A syndrome characterized by trigonocephaly, severe mental
	retardation, hypotonia, variable cardiac defects, redundant skin, and dysmorphic facial features,
	including upslanted palpebral fissures, epicanthal folds, depressed nasal bridge, and low-set,
	posteriorly rotated ears.
Molecular Weight:	55.4 kDa
NCBI Accession:	NP_005807
Application Details	

Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Buffer:	PBS, pH 7.4
Handling Advice:	Please avoid repeated freeze-thaw cycles.
Storage:	-20 °C

ELISA

Image 1. Immobilized Human CD96 (C110S), His Tag (ABIN5674624,ABIN6253681) at 5 μ g/mL (100 μ L/well) can bind Human CD155, Fc Tag (ABIN2870620,ABIN2870621) with a linear range of 39-156 ng/mL (QC tested).

SDS-PAGE

Image 2. Human CD96 (C110S), His Tag on under reducing (R) condition. The gel was stained overnight with Coomassie Blue. The purity of the protein is greater than 90 % .
