## Datasheet for ABIN6255201 anti-CHEK1 antibody (pSer317)

10 Images

1 Publication

#### Overview

Quantity:	100 μL
Target:	CHEK1
Binding Specificity:	pSer317
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This CHEK1 antibody is un-conjugated
Application:	Western Blotting (WB), ELISA, Immunohistochemistry (IHC), Immunofluorescence (IF), Immunocytochemistry (ICC)

## Product Details

Immunogen:	A synthesized peptide derived from human Chk1 around the phosphorylation site of Ser317.
Isotype:	lgG
Specificity:	Phospho-Chk1 (Ser317) Antibody detects endogenous levels of Chk1 only when phosphorylated at Serine 317.
Predicted Reactivity:	Pig,Zebrafish,Bovine,Horse,Sheep,Rabbit,Dog,Chicken
Purification:	The antibody is from purified rabbit serum by affinity purification via sequential chromatography on phospho- and non-phospho-peptide affinity columns.

Alternative Name:	CHEK1 (CHEK1 Products)
Background:	Description: Serine/threonine-protein kinase which is required for checkpoint-mediated cell
	cycle arrest and activation of DNA repair in response to the presence of DNA damage or
	unreplicated DNA. May also negatively regulate cell cycle progression during unperturbed cell
	cycles. This regulation is achieved by a number of mechanisms that together help to preserve
	the integrity of the genome. Recognizes the substrate consensus sequence [R-X-X-S/T]. Binds
	to and phosphorylates CDC25A, CDC25B and CDC25C. Phosphorylation of CDC25A at 'Ser-17
	and 'Thr-507' and phosphorylation of CDC25C at 'Ser-216' creates binding sites for 14-3-3
	proteins which inhibit CDC25A and CDC25C. Phosphorylation of CDC25A at 'Ser-76', 'Ser-124',
	'Ser-178', 'Ser-279' and 'Ser-293' promotes proteolysis of CDC25A. Phosphorylation of CDC25A
	at 'Ser-76' primes the protein for subsequent phosphorylation at 'Ser-79', 'Ser-82' and 'Ser-88' b
	NEK11, which is required for polyubiquitination and degradation of CDCD25A. Inhibition of
	CDC25 leads to increased inhibitory tyrosine phosphorylation of CDK-cyclin complexes and
	blocks cell cycle progression. Also phosphorylates NEK6. Binds to and phosphorylates RAD51
	at 'Thr-309', which promotes the release of RAD51 from BRCA2 and enhances the association
	of RAD51 with chromatin, thereby promoting DNA repair by homologous recombination.
	Phosphorylates multiple sites within the C-terminus of TP53, which promotes activation of
	TP53 by acetylation and promotes cell cycle arrest and suppression of cellular proliferation.
	Also promotes repair of DNA cross-links through phosphorylation of FANCE. Binds to and
	phosphorylates TLK1 at 'Ser-743', which prevents the TLK1-dependent phosphorylation of the
	chromatin assembly factor ASF1A. This may enhance chromatin assembly both in the
	presence or absence of DNA damage. May also play a role in replication fork maintenance
	through regulation of PCNA. May regulate the transcription of genes that regulate cell-cycle
	progression through the phosphorylation of histones. Phosphorylates histone H3.1 (to form
	H3T11ph), which leads to epigenetic inhibition of a subset of genes. May also phosphorylate
	RB1 to promote its interaction with the E2F family of transcription factors and subsequent cel
	cycle arrest.
	Gene: CHEK1
Molecular Weight:	56kDa
Gene ID:	1111
JniProt:	014757
	p53 Signaling, Apoptosis, Cell Division Cycle, DNA Damage Repair

Application Details	
Application Notes:	WB 1:500-1:2000, IHC 1:50-1:500, IF/ICC 1:100-1:500, ELISA(peptide) 1:20000-1:40000
Restrictions:	For Research Use only

## Handling

Format:	Liquid
Concentration:	1 mg/mL
Buffer:	Rabbit IgG in phosphate buffered saline , pH 7.4, 150 mM NaCl, 0.02 % sodium azide and 50 % glycerol.
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20 °C. Stable for 12 months from date of receipt.
Expiry Date:	12 months

### Images

## Immunohistochemistry

**Image 1.** ABIN6267224 at 1/100 staining human appendiceal tissue sections by IHC-P. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the antibody for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

#### Immunohistochemistry

**Image 2.** ABIN6267224 at 1/100 staining mouse spleen tissue sections by IHC-P. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the antibody for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

#### Immunofluorescence (fixed cells)

**Image 3.** ABIN6267224 staining HeLa by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25°C. The primary antibody was diluted at 1/200 and incubated with the sample for 1 hour at 37°C. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) Ab, diluted at 1/600, was used as the secondary antibody.

Please check the product details page for more images. Overall 10 images are available for ABIN6255201.
